# **Executive Summary**

The following is a summary of the key findings relative to *Region IV* respondents.

# **Adult Use of Alcohol** [see Table 2.1.1]

• Similar to the statewide results, when participants were asked to rank the seriousness of *adult* use of alcohol, 66 percent of the *Community Member* participants indicated this to be a *minor to moderate* problem in their community. According to the *Key Informants*, 54.9 percent felt that *adult* alcohol use was a *minor to moderate* problem in their community.

# **Youth Use of Alcohol** [see Table 2.1.1]

• Of the *Community Member* participants, 53.1 percent felt that *youth* alcohol use was a *minor to moderate* problem in their community. In reference to the *Key Informants*, the majority (58.5%) felt that *youth* alcohol use in their community was a *serious* problem.

# **Adult Use of Methamphetamine** [see Table 2.1.6]

• In regards to the responses from the *Community Members*, 34.9 percent specified that they *don't know* the extent of the problem regarding *adult* use of methamphetamine. Of the *Key Informant* population, 50 percent of respondents indicated *adult* use of methamphetamine to be a *minor to moderate* problem within their community.

# **Youth Use of Methamphetamine** [see Table 2.1.6]

• Reponses were very similar when comparing youth to adult use of methamphetamine. Of the *Community Member* participants, 36.5 percent specified they *don't know* the extent of the problem. Among the *Key Informants*, 53.7 percent perceived methamphetamine use by *youth* as a *minor to moderate* problem.

# **Contribution of Drug and Alcohol Use to Crashes or Injuries** [see Table 2.2.1]

• Of the *Community Members*, 50.2 percent believed that the contribution of drug/alcohol use to crashes/injuries was a *minor to moderate* problem in their community. Among *Key Informants*, the majority (63.4%) felt this was a *serious* problem within their community.

# **Community Acceptance of Underage Drinking** [see Table 3.1]

• The *Community Member* respondents generally *disagree-strongly disagree* (73.9%) with the presence of community acceptance of underage drinking within their community. Of the *Key Informants*, 54.9 percent *disagree-strongly disagree* with this statement.

# **Support for Increasing Taxes on Alcohol** [see Table 4.1]

• When respondents were asked to indicate the extent to which they either agree or disagree with increasing alcohol taxes, 56.8 percent *agree-strongly agree* in support of increasing alcohol taxes. The *Key Informant* respondents were also supportive in regards to increasing alcohol taxes, in that 68.3 percent *agree-strongly agree*.

# **Laws Prohibiting Giving Alcohol to Your Own Children** [see Table 4.2]

• Of the *Community Member* respondents, 68 percent indicated that *yes* they would be in support of this type of law. The *Key Informant* population was also supportive of this type of law in that 73.2 percent responded that *yes* they would be in support of a law prohibiting giving alcohol to "your own" children.

# **Support for Advertising Liquor/Beer/Wine Ads on Television/Billboards** [see Table 4.3]

• The results were very similar regarding all three questions related to alcohol advertising. Over sixty-one percent of the *Community Member* respondents were in support of banning alcohol advertisements on either television or billboards. Among the *Key Informant* population, over sixty-four percent indicated that *yes* they would support banning this form of advertising.

# **Youth Accessibility to Alcohol** [see Table 5.1]

- When the *Community Member* respondents were asked "How difficult is it for youth to get an older person to buy alcohol for them," 49.4 percent believed that it is *slightly/somewhat* difficult. Among the *Key Informant* population, 47.6 percent of respondents indicated that it was *not at all* difficult for youth to get an older person to buy alcohol for them.
- When *Community Members* were asked the following, "How difficult is it for youth to sneak alcohol from their home or a friend's home," 53.1 percent believed this was *not* at all difficult. Of the *Key Informant* population, 67.1 percent specified that it was *not* at all difficult for youth to obtain alcohol in this manner.

# **Adult/Youth Access to Marijuana/Methamphetamine** [see Table 5.2]

- The *Community Member* respondents perceived access to marijuana as *slightly/somewhat* difficult as indicated by 47.7 percent. Of the *Key Informant* respondents, 45.1 percent also responded this was *slightly/somewhat* difficult for adults/youth to obtain.
- *Community Members* perceived access to **methamphetamine** as *slightly/somewhat* difficult as indicated by 49 percent. The majority of *Key Informant* respondents (57.3%) also indicated that **methamphetamine** was *slightly/somewhat* difficult to access.

# **Presence of Community Action Plan** [see Table 6.2]

• Among the *Community Members*, the majority (63.1%) *did not* know if their community had any action plan in place. Of the *Key Informant* respondents, 41.5 percent indicated that *yes* there was a plan in place within their community.

# **Sources of Information Regarding Crime** [see Table 6.3]

• The most common source accessed for information regarding crime for the *Community Members* was I (44%). Similar to the Community Member responses, the most common source of information regarding crime for the *Key Informants* was *Television* (52.4%).

# Introduction

The Rural Crime and Justice Center (RCJC) at Minot State University, in conjunction with North Dakota's Department of Human Services, implemented a Community Readiness Survey to gauge perceptions of alcohol and other drug use in North Dakota communities. This was made possible through funding provided by North Dakota's Department of Human Services, Division of Mental Health and Substance Abuse Services. The Community Readiness Survey assessed the perceptions of Youth Alcohol and Other Drug Use by surveying community members living in North Dakota. The sample represents eight regions in North Dakota and within each region frontier, rural, and urban communities are represented based on population density. This report will focus on the data collected from *Region IV* and will also include the statewide results. This is not a statistical comparison; region wide data is simply presented alongside statewide data.

The RCJC conducted a similar study in 2005, surveying community members residing in Region II of North Dakota. The Region II Alcohol, Tobacco and Other Drug use study provided a concrete foundation for looking at parallel issues at the statewide level.

The use and abuse of alcohol and other drugs has a considerable impact on communities throughout the nation. Often times the use of such substances is overlooked by members within a particular community. Consequently, community perception and the readiness to address the problem of alcohol and other drug use needs to be periodically assessed in order to fully develop a comprehensive plan.

#### **Project Goals**

The specific goal of the Community Readiness Survey was to design an assessment tool targeting communities and the public's readiness to respond to alcohol and other drug use (AOD) among adults and youth. Since North Dakota communities are currently experiencing high rates of binge drinking among adolescents, RCJC, along with the North Dakota Department of Human Services, Division of Mental Health and Substance Abuse Services, recognized the importance of assessing community members' perceptions regarding these issues. The five pertinent areas that were addressed in the survey were: 1) Community perception of an AOD problem; 2) Permissiveness of attitudes towards AOD use; 3) Community support for AOD prevention; 4) Community perception of adolescent access to alcohol and other illegal substances; and 5) Overall perception of community commitment.

By addressing communities at local levels, we can begin to identify the real issues that are plaguing our communities. It is our hope that this project will lead to promising initiatives concentrating on our communities and lead to preventative measures that can decrease the rate of AOD concerns in North Dakota.

#### Literature Review

The destructive use and abuse of alcohol, tobacco, and other drugs has become a major social problem deeply rooted in our society (www.bridges-mccasa.org/ypp.html). The impressionability of youth makes them extremely vulnerable to many problems associated with alcohol and drug abuse. Furthermore, adolescence is an experimental stage in life and often results in the testing of illegal substances. Since North Dakota is leading the nation in adolescent binge drinking (NSDUH, 2004-05), preventative efforts need to be taken at various levels in an attempt to curtail these problems.

#### **National Survey on Drug Use and Health**

Data obtained from the *State Estimates of Substance Use from the 2004-2005 National Surveys on Drug Use and Health (NSDUH)* illustrate the extent of substance abuse issues within communities nationwide. The Substance Abuse and Mental Health Services Administration (SAMHSA) combined two years of data to enhance the accuracy of estimates for less populated states. The survey evaluates state rates of use of illegal drugs, binge drinking, serious mental illness, and tobacco use. State-by-state data provides a powerful tool for policymakers at the federal, state, and local levels by identifying needs and targeting prevention and treatment resources.

#### **Alcohol**

In regards to rates of past month alcohol use, North Dakota was ranked in the top five of all states for all three age groups (12 to 17, 18 to 25, and 26 or older) (NSDUH, 2004-05).

Results from the National Survey indicate that at the national level, almost a quarter of all persons aged 12 or older participated in binge use of alcohol in the past month. Binge alcohol use is defined as "drinking five or more drinks on the same occasion (i.e., at the same time or within a couple hours of each other) on at least one day in the 30 days prior to the survey" (NSDUH, 2004-05). The highest rates of binge alcohol use occurred among persons aged 18 to 25. North Dakota had the highest rate in this age group at 58.1 percent, almost double the highest rate among persons aged 26 or older and almost four times the highest rate among youth aged 12 to 17 (NSDUH, 2004-05). Based on this finding alone, an assessment of communities in North Dakota is necessary in order to develop policy to concentrate on these issues.

In assessing perceptions of the risk of binge alcohol drinking use to the actual rates of usage, the National Study concluded that although North Dakota had the highest rate of binge drinking among all 50 states, the *perceived* risk of binge drinking was among the *lowest*. Similarly, six other states with higher rates of binge drinking also scored lower in terms of perception of risk.

# **Illicit Drugs**

According to the results of NSDUH (2004-2005), the frequent use of illicit drugs in North Dakota appears to be less severe than alcohol use. The survey results indicate that North Dakota was one of two states to show a significant decrease from 2003-04 to 2004-05 in the percentage of "all persons aged 12 or older who used an illicit drug in the past month" (North Dakota decreased from 7.5% to 6.2%).

North Dakota was also one of six states to represent a decline amid the 2003-04 and 2004-05 studies, in "past year use of marijuana among all persons aged 12 or older," dropping from 10.1 percent to 8.5 percent. In regards to other illicit drugs, aside from marijuana, state-by-state results also show improvements in North Dakota's prevalence of use. According to NSDUH, "illicit drugs other than marijuana include cocaine, heroin, hallucinogens, inhalants, and the nonmedical use of prescription-type pain relievers, tranquilizers, stimulants, and sedatives" (NSDUH, 2004-05). Both North and South Dakota had the lowest rate (2.8%) of past month use of an illicit drug other than marijuana among persons 12 or older, compared to the national average of 3.6 percent and the state with the highest rate of use, Colorado at 4.5 percent. Lastly, with regards to past year cocaine use among all persons aged 12 or older, North Dakota had the lowest rate (1.7%) in that population (NSDUH, 2004-05).

The focus of the next section is to identify the significance of public opinion, the influence of the media on the configuration of public opinion, and details how this information can be interpreted and useful when looking at developing effective prevention strategies for Alcohol and Other Drug use among youth. Results from the 2007 Youth Risk Behavior Survey will be incorporated.

#### **Media Influence on Public Opinion**

Mass media has a tendency to shape a person's outlook, their cultural identity, as well as processes of open exchange (www.wz.nrw.de, 2006). The nature of the media has changed drastically and has evolved with technology. Therefore, the source of information for people, whether it is television, newspaper, internet, or other forms of mass media may play a crucial role in shaping ideas and perceptions. This can lead to the development of inaccurate understanding of the issues at hand, especially if the source of information does not clearly state the distinction between fact and opinion.

### North Dakota Youth Risk Behavior Survey (YRBS)

Through the implementation of the YRBS, youth are provided the opportunity to share their experiences with AOD in this survey that is conducted every two years. High School students are asked a series of questions in which they are instructed to answer "truthfully." The YRBS is designed to target those behaviors related to the paramount causes of death and disability among youth and young adults and to evaluate how these risky behaviors change over time (North Dakota High School, YRBS data, 2007). The YRBS is a self-reporting survey that is intended to measure health-risk behaviors that fall into six categories:

- Behaviors that result in unintentional injuries and violence
- Tobacco use
- Alcohol and other drug use
- Sexual behaviors that result in HIV infection, other sexually transmitted diseases, and unintended pregnancies
- Dietary behaviors
- Physical activity (ND YRBS data, 2007)

The data obtained from the YRBS represent both urban and rural areas allowing the data to focus on problem areas geographically. Thus, data may potentially be helpful in identifying which regions are in most need of resources and assistance to target problems plaguing their youth. According to North Dakota's YRBS data (2007), 6,745 middle school students (Grades 7-8) from 110 North Dakota middle schools participated in the survey and 9,750 high school students (Grades 9-12) from 104 North Dakota high schools participated in the survey.

# North Dakota YRBS (2007) Middle School Results

Results pertaining to the use of alcohol and/or other drugs will be discussed. The following section will include *Statewide* results from the YRBS, as well as data as it pertains to *Region IV* (Grand Forks Area). *Alcohol Use* 

In regards to the "percentage of students who have ever had a drink of alcohol, other than a few sips," the Centers for Disease Control and Prevention (CDC) *Statewide* results indicated that 32.7 percent of students have had at least one drink of alcohol in their lifetime; *Region IV* results indicated that 30.4 percent of students indicated ever having had a drink of alcohol (North Dakota YRBS, 2007).

The percentage of students who indicated having had five or more drinks of alcohol in a row, that is, within a couple of hours (binge alcohol use) was 15 percent for the *Statewide* results; percentage of use in *Region IV* was lower at 12.1 percent.

Marijuana & Other Drug Use

The percentage of students who specified ever having used marijuana was 7.8 percent according to the *Statewide* results. *Region IV* results showed that 7.5 percent of students indicated having used marijuana at least once in their lifetime. The *Statewide* percentage of students who had sniffed glue, breathed the contents of spray cans, or inhaled any paints or sprays to get high for the first time before age 11 years was 9.5 percent; results for *Region IV* indicated 8.6 percent. Students who responded as ever having used methamphetamines – also called speed, crystal, crank or ice, was 1.7 percent *Statewide*; *Region IV* results indicated that 1 percent of students have used methamphetamine at least once in their lifetime.

### North Dakota YRBS (2007) High School Results

Alcohol Use

According to the *Statewide* results, the percentage of students who "had at least one drink of alcohol on one or more days during their life" was 73.9 percent. *Region IV* (Grand Forks Area) results specified that 71.9 percent of students had reported engaging in alcohol use at least once in their lifetime.

*Statewide*, 32.5 percent of students specified having had "five or more drinks of alcohol in row, that is, within a couple of hours, on one or more of the past 30 days" (binge alcohol use). *Region IV* results illustrated that a lower percentage (30.5%) of students had engaged in this type of behavior within the past 30 days.

When students were asked to report whether they "drank a usual type of alcohol during the past 30 days," 43.9 percent of students *Statewide* reported that they preferred a specific type of alcohol to consume; percentages for *Region IV* indicated that 42.4 percent of students preferred to consume a specific type of alcohol.

Marijuana & Other Drugs

According to the *Statewide* results, 30.1 percent of students indicated having used "marijuana one or more times during their life;" *Region IV* results indicate that 29.7 percent of students had engaged in this type of behavior.

With a focus on other drugs, students were asked a series of questions regarding prevalence of use. *Statewide*, 6.2 percent of students reported having used "any form of cocaine, including powder, crack, or freebase one or more times during their life" (North Dakota YRBS, 2007). *Region IV* indicated lower numbers in that 5.6 percent of students reported having used a form of cocaine on one or more occasions in their lifetime.

When students were asked if they have "sniffed glue, breathed the contents of aerosol spray cans, or inhaled any paints or sprays to get high one or more times during their life," *Statewide* results illustrated that 11.1 percent of students had engaged in this behavior; percentages for *Region IV* were greater, at 15.1 percent.

When asked whether they had used "methamphetamines one or more times during their life," the *Statewide* results indicated that 4.1 percent of students had used methamphetamines at least once, and *Region IV* use was slightly higher at 4.3 percent.

*Statewide* outcomes indicated that the percentage of students who were "offered, sold, or given an illegal drug by someone on school property during the past 12 months" was 18.7 percent. *Region IV* percentages were the same at 18.7 percent.

The next section will discuss in detail the research methods that were used to efficiently complete the research process. The topics that will be discussed include survey construction/measurement, sample populations, overall sample sizes, participant selection for the *Key Informant* groups and the *Community Members*, the procedure for survey distribution, and response rates for both participants and non-participants.

# Methods

The RCJC, in collaboration with the North Dakota Department of Human Services, Division of Mental Health and Substance Abuse Services, completed this research project in an attempt to assess community perceptions regarding issues of alcohol and substance abuse. The data obtained reflect small towns and communities and resident's willingness to recognize AOD use within their communities. Recipients of the survey were provided the opportunity to communicate their beliefs and opinions regarding AOD abuse. It is anticipated that the data collected from this study will create opportunities for frontier, rural, and urban communities within North Dakota to respond effectively to these issues.

# **Survey Development**

This project involved one data collection instrument designed to assess the community's perception of AOD use within their community. A portion of the questions contained in this survey are used with permission from the *Community Readiness Survey* © 1999 by Minnesota Institute of Public Health (www.miph.org). Five specific areas were addressed in the survey: Community Perception of an Alcohol and Other Drug (AOD) Problem; Permissiveness of Attitudes Toward AOD use; Community Support for AOD Prevention; Access to Alcohol and Other Drugs; and Perception of Community Commitment. The input received from selected community members will facilitate more effective responses in dealing with substance abuse.

The survey included ten demographic questions, sixty-one ranking questions, followed by three open-ended questions.

### **Survey Construction/Measurement**

Ideally, this survey was created to evaluate the opinions of community members related to AOD use within frontier, rural, and urban communities throughout North Dakota. Of the five specific classifications included, each was intended to evaluate different areas of AOD issues. This survey was compiled based on a ranking system and all questions, with the exception of the demographic questions, were ranked using two, four, or five point Likert scales.

# **Section 1 - Demographics**

This section of the survey focused on demographic questions, including age, sex, race/ethnicity, employment status and current occupation, level of church and community volunteering, recipient location, and number of children present in the home.

## Section 2 - Community Perception of an AOD Problem

Items in this category focused on perception of alcohol and other drug use issues within each community. Participants were questioned as to how much of a problem they perceived for both adults and youth regarding the following: use of alcohol; use of tobacco; and use of marijuana to be in their community. Other items consisted of use of inhalants, cocaine, methamphetamine, over-the-counter drugs,

prescription drugs, and hallucinogens. Final items in this section included contribution of drug and alcohol use to crashes or injuries and contribution of drug and alcohol use to crime.

### Section 3 - Permissiveness of Attitudes toward AOD use

This section focused on how tolerant community members may or may not be in relation to AOD issues. Items required participants to indicate the extent to which they either *agree* or *disagree* with the following statements: youth consuming alcohol at parties; youth drinking and driving; youth smoking cigarettes; youth alcohol and other drug experimentation; parents offering alcoholic beverages to youth in their own homes; community acceptance of underage drinking; driving while under the influence of alcohol and/or drugs; and riding in a motor vehicle with someone under the influence of alcohol and/or drugs.

# **Section 4 - Community Support for AOD Prevention**

Willingness to support AOD prevention initiatives was the focus of this section of the survey. Participants were asked to rank the items ranging from *strongly disagree* to *strongly agree*. Items included the following: a focus on law enforcement competency, support for educational and prevention programs, community commitment, advertising devices, tax issues related to alcohol and tobacco, the enforcement of drinking and driving laws, and laws prohibiting parents providing alcohol to their own children.

Additional items in this section assessed responses regarding support for the following statements: drinking age of 21 years; penalties for adults who provide alcohol to youth; compliance checks; laws prohibiting giving alcohol to your own children; and DUI checkpoints. Respondents were also questioned as to whether or not they support *bans* on the following: liquors advertisements on TV; beer and wine advertisements on TV; and billboard alcohol advertisements. The final series of questions asked respondents if they would be willing to attend the following events if they were alcohol-free: a party; wedding dance/reception; and sporting events.

### **Section 5 - Access to Alcohol and Other Drugs**

This series of questions focused on the availability of alcohol and other drugs within the sampled communities. Respondents were asked to indicate the level of difficulty in which youth can obtain alcohol under the following circumstances; liquor store accessibility, bar accessibility, at home accessibility, and alcohol provided by parents and/or other family members. Regarding the accessibility of illegal substances within the community, respondents were asked to rank how difficult it is to access marijuana, inhalants, cocaine, methamphetamine, and hallucinogens.

# **Section 6 - Perception of Community Commitment**

Lastly, participants were asked to rank the community's overall commitment to addressing the perceived problems of alcohol and substance use. The questions focused on the importance of preventing alcohol and drug use among youth, concern for the availability of sufficient prevention programs, the most effective method for achieving drug free youth, through educating youth, parents, or community members, the presence of leaders within the community willing to address these issues, where to seek assistance

within the community regarding these matters, the presence of a community action plan, and primary sources for information regarding crime.

# **Sample Population**

Participants were selected using a random sample from telephone directories representing community members throughout North Dakota, as well as databases of professionals obtained from respective agencies chosen for the study. Random numbers were selected from a random numbers table, as guided by statistical sampling procedures. The random numbers identified were 34 and 81. For the shorter directories, every 34th name was selected and for the larger directories, every 81st name. The numbers chosen were adequate in ensuring that each directory was, at minimum, sampled through one time.

### **Overall Sample Sizes**

The overall sample consisted of 16,125 individuals selected statewide. The sample of 16,125 was divided into two groups: *Community Members* and *Key Informants*. The same survey instrument was used for both groups.

## **Community Members Participant Selection (N=14400)**

For the Community Members sample of 14,400, participants were selected through a systematic random sampling of households. The households to be sampled were selected from North Dakota telephone directories. The two main sources utilized to obtain this information included: 1) North Dakota Telephone Association (i.e., maintain listings on Local Exchange Companies) and 2) DEX electronic directories. Local exchange companies provided the following directories for sampling: Polar Communications; Souris River Telephone (SRT) Communications; Consolidated Badlands; Southeast North Dakota; Durum Triangle; and Northwest North Dakota. DEX Directories provided residential information on the following cities and surrounding areas: Bismarck/Mandan; Dickinson; Fargo/Moorhead; Grafton; Grand Forks/East Grand Forks; North Dakota/South Central; Jamestown/Valley City; Wahpeton/Breckenridge; and Williston. The listings included the following information: non-residential listings; duplicate phone numbers (i.e., households with more than one landline were counted as one household); and listings from towns/cities (i.e., East Grand Forks, Moorhead, Breckenridge) bestriding neighboring states (i.e., Minnesota, South Dakota).

Since the community member participants were selected from the telephone directories, the selection included the risk of eliminating potential candidates for the study due to unlisted telephone numbers and relocation. However, this was the most exhaustive and accurate listing that could be obtained for the purposes of this study.

## **Sample Size for Community Members**

Sample sizes were predetermined by the Department of Human Services, Division of Mental Health and Substance Abuse Services (See Appendix A). Within each region, 1,800 community members (i.e., 600

each from **urban**, **rural**, **frontier**) were sampled tallying 14,400 across all eight regions in North Dakota. Definitions of population density, although differing by source, were obtained from the U.S. Census Bureau system. *Urban Areas* (UA) are defined as those counties with a central city and the surrounding area consisting of a population of 50,000 or more. An *Urban Cluster* (UC) consists of densely settled territory that has at least 2,500 people but fewer than 50,000. Subsequently, by this definition *Rural Areas* consist of all territory located outside of urbanized areas and urban clusters. A *Frontier County* describes a county with a population density of six or fewer persons per square mile (U.S. Census Bureau, Census 2000). For North Dakota, persons per square mile according to the U.S. Census Bureau, 2000, averaged 9.3.

# **Key Informant Group participant selection (N=1725)**

The Key Informant sample was selected from the following professions: School Counselors; Family Medicine/Physicians; Social Services; Treatment Providers; Prevention Coordinators; and Law Enforcement agencies to include Police and Sheriff. The names and addresses of individuals were obtained by purchasing Excel databases of the respective agencies/entities. A listing of current employees within each professional group was obtained as detailed below:

- 1. *School Counselors in North Dakota*-purchased through North Dakota Department of Public Instruction (NDDPI);
- 2. *Family Medicine Physicians*-free of charge through the North Dakota Academy of Family Physicians;
- 3. Social Services-purchased from North Dakota Board of Social Work Examiners (NDBSWE);
- 4. *Treatment Providers* purchased from North Dakota Board of Addiction Counseling Examiners (NDBACE)
- 5. Law Enforcement Agencies-Police and Sheriff Departments were identified through a public listing of agencies from the North Dakota Peace Officer Standards and Training Boards (NDPOST).
- 6. *Prevention Coordinators*-provided by the state Prevention Administrator

Each North Dakota law enforcement agency (113) was included in the sample (i.e., one survey mailed to each agency/department), as well as one survey mailed to all 12 Prevention Coordinators statewide (totaling 125 surveys distributed among these two groups).

For the remaining Key Informant Groups, *Proportional Allocation* was used to determine what percentage of each database must be selected to attain a sample of 1,600. The table below demonstrates the proposed sample sizes as guided by this formula:

| KEY INFORMANT GROUP        | Group Database N | Sample N |
|----------------------------|------------------|----------|
| School Counselor           | 347              | 209      |
| Family Medicine Physicians | 385              | 232      |
| Social Services            | 1648             | 990      |
| Treatment Providers        | 281              | 169      |
| Law Enforcement agencies   | 113              | 113      |
| Prevention Coordinators    | 12               | 12       |
| Total                      | 2786             | 1725     |

The proportions were sampled from each database using a *Random Number Function* in Microsoft Office Excel, 2007. This function randomly selected the sample from each group (i.e., assigned computer program-generated random numbers to each row item/name, shuffled, and sorted the spreadsheet allowing the desired sample to be drawn).

# **Region IV Sample Population**

Of the 14,400 community members sampled statewide, 1,800 individuals were selected to represent *Region IV* by Urban, Rural, and Frontier population densities. Durum Triangle Telephone Directory, Polar Communications, and the online DEX directory were the directories used for sampling, therefore represented the population within this region.

# **Survey Distribution**

Prior to distributing the survey, a press conference was held focusing on alcohol and substance abuse among youth in North Dakota communities in which the public was informed that a statewide AOD study would be administered in the spring. Of the first sample, 1,725 participants were selected from the key informant databases representing the professional groups previously mentioned. For the 14,400 general community members, these individuals were selected from the telephone directories to include all eight regions of North Dakota.

Surveys were mail administered and included a detailed letter discussing the nature and anonymity of the study (to include confidentiality, participation opt in/opt out, etc.), a prepaid return envelope, and an entry form for the incentive gas card drawing. This provided recipients the opportunity to become eligible for a chance to win a prepaid gas card reliant upon completion and return of the survey.

In order to minimize the number of *undeliverable* surveys, the envelope was addressed to the name selected in the phone directory and included *or current resident*. In May 2008, the surveys were mailed to the selected 16,125 and respondents were given three weeks to complete and return the survey. Data entry was completed on June 30, 2008.

### **Response Rates - Statewide Participants**

Of the 16,125 individuals surveyed, the overall response rate was 18.9 percent (3,046 of the 16,125). The response rate for the Community Members (14,400 sampled) was 16.81 percent, and for the Key Informants (1,625 sampled), the response rate was 36.29 percent.

The following is a breakdown of those Key Informant Groups with *adequate* rates of response: School Counselors (53.11%); Social Services (35.35%); Treatment Providers (41.42%); Police Departments (43.44%); Sheriffs (33.96%); and Prevention Coordinators (100%). The only Key Informant Group generating a low response rate was Family Medicine Physicians (16.81%). In an attempt to ensure accurate response rates, respondents were given the opportunity to qualify for a prepaid gas card drawing if the survey was completed and returned. Among the surveys completed, the incentive participation rate was 15.2 percent.

# **Response Rates - Statewide Non-Participants**

The number of items returned totaled 79 (.48% of the surveys mailed out). Of the Key Informants, four social workers and one family medicine physician surveys were returned stating "no longer work here." Three surveys received from one law enforcement agency were excluded, as they were photocopies of the original survey. Among the Community Members, 52 surveys were returned as "undeliverable." Remaining surveys were returned uncompleted for the following reasons as noted:

- Deceased (n=2);
- Do not participate in surveys/remove name from mailing list (n=4);
- Did not feel qualified/not in touch with current issues/too old (n=3):
- Completed surveys were returned past the deadline (n=13).

### **Response Rates - Region IV Participants**

Three hundred and twenty-three individuals from *Region IV* participated in the survey. Of the 1,800 Community Members sampled within *Region IV*, 241 individuals completed and returned the survey. This resulted in a response rate of 13.4 percent. Among Key Informants, the total number of respondents in this group was 82, which accounts for 25.4 percent of the total (N=323) within this region. The following is a breakdown of representation by profession within Region IV: *School Counselors* (N=14, 4.3%); *Family Medicine-Physicians* (N=8, 2.5%); *Social Services* (N=45, 13.9%); *Treatment Providers* (N=8, 2.5%); *LE-Police* (N=4, 1.2%); *LE-Sheriff* (N=2, .6%); *Prevention Coordinators* (N=1, .3%).

### Sample Composition by Respondent Geographic Location (Region IV, N=323)

#### **FRONTIER** (N=70, 21.7%)

- **Counties:** Nelson
- Towns/Cities: Aneta\*, Dahlen, Kloten, Lakota\*, McVille, Michigan, Pekin, Petersburg, Tolna

#### **RURAL** (N=104, 33%)

- **Counties:** Grand Forks, Pembina, Walsh
- Towns/Cities: Adams, Arvilla, Cavalier\*, Drayton, Edinburg, Emerado\*, Fairdale, Fordville, Gilby, Grafton\*, Grand Forks AFB, Lankin\*, Larimore\*, Manvel\*, Minto, Mountain, Northwood\*, Park River\*, Pembina\*, Reynolds, Thompson\*, Walhalla

#### **URBAN** (N=149, 46.1%)

- **Counties:** Grand Forks
- **Towns/Cities:** Grand Forks\*

The next section will highlight the results of the study and will include frequencies (basic percentages) according to *Community Members* and *Key Informants*, separated by Urban, Rural, and Frontier. This will include *Region IV* results, as well as *Statewide* results.

<sup>\*</sup>denotes Key Informant town/city of residence

# Section 1: Demographics

This section of the survey focused on demographic questions, including age, sex, race/ethnicity, employment status and current occupation, level of church and community volunteering, recipient location, and number of children present in the home.

| Table 1.1: WHAT IS                            | S YOUR AGE?    |           |                  |           |                      |           |              |                  |                           |           |                  |          |                  |          |                     |           |                  |                  |              |

|                                               | Did not answer | 1<br>12   | 1.1<br>1.4       | 1 7       | 1.2<br>1.0           | 2<br>14   | 3<br>1.8     | 4 33             | 1.7<br>1.4                | -<br>2    | -<br>.5          | -        | -                | -        | -                   | - 2       | 3                | 4<br>35          | 1.2<br>1.2   |
|                                               | Total          | 89<br>863 | 100<br>100       | 85<br>711 | 100<br>100           | 67<br>783 | 100<br>100   | 241<br>2357      | 100<br>100                | 60<br>396 | 100<br>100       | 19<br>83 | 100<br>100       | 3<br>114 | 100<br>100          | 82<br>593 | 100<br>100       | 323<br>2950      | 100<br>100   |

Viewing the overall age distribution for the *Statewide* and *Region IV* respondents, (47.7% and 47.7% respectively) it is apparent that nearly fifty percent of the respondents fall within the 45-64 age range. Over one-quarter (26.9%) of *Region IV* respondents were between 25-44 years of age and 22.6 percent were 65 or older. Moreover, when compared to the U.S. Census 2006 estimates which reported that persons 65 years and over account for 14.6 percent of North Dakota's population, Region IV was over-representative.

According to the U.S. Census Bureau 2006, North Dakota race/ethnicity estimates for white persons was 91.9 percent, and for *American Indian* and *Alaska Native* persons, 5.4 percent. Given the racial and ethnic composition of North Dakota, it is evident that the sample was slightly overrepresented with 94.8 percent of the *Statewide* sample and 96.3 percent of the *Region IV* sample being *Caucasian*.

Volunteering is often considered to be a primary activity for promoting both social and personal change. Nearly half (48.8%) of *Statewide* respondents indicated they participate in *church-related* community volunteering. Similarly, 53.6 percent of *Region IV* respondents indicated participation in *church-related* volunteering while 46.1 percent indicated they do not participate. When asked to specify the type of *church-related* volunteering, responses ranged from providing guidance to youth, teaching bible studies/Sunday school, and fundraising through membership in women's groups.

In regards to *civic-related* volunteering activity, two-thirds of *Statewide* (63.0%) and *Region IV* (64.1%) respondents reported that they *do not volunteer*.

Overall, roughly sixty percent of *Statewide* and *Region IV* respondents reported having *no children (including children NOT living at home)* while almost thirty percent (28.4% *Statewide* and 29.7% *Region IV*) indicated *1-2* children. This would be expected given that a considerable number of respondents fell within the 45 and above age groups.

# Section 2: Community Perception of Alcohol & Other Drug (AOD) Problem

Items in this category focused on perception of alcohol and other drug use issues within each community. Participants were questioned as to how much of a problem they perceived for both adults and youth regarding the following: use of alcohol; use of tobacco; and use of marijuana to be in their community. Other items consisted of use of Inhalants, Cocaine, Methamphetamine, Over-the-Counter Drugs, Prescription Drugs, and Hallucinogens. Final items in this section included contribution of Drug and Alcohol use to crashes or injuries, and contribution of Drug and Alcohol use to crime.

**NOTE:** It should be kept in mind that the following tables are **NOT comparative** in nature. In other words, though presented side-by-side, the responses of the community members and those of the key informants are NOT being compared. The tables simply present a descriptive account about how each group responded to each question.

Regarding *adult* use of alcohol, 65.2 percent of the *Statewide Community Members* indicated that *adult* use of alcohol is a *minor to moderate* problem in their community and 23.2 percent felt this was a *serious* problem. Similarly, 58.0 percent of the *Statewide Key Informant* participants felt this was a *minor to moderate* problem within their community and 39.8 percent responded this was a *serious* problem. Within *Region IV*, 66 percent of the *Community Member* and 54.9 percent of the *Key Informants* indicated *adult* use of alcohol to be a *minor to moderate* problem within their community, while 21.2 percent and 42.7 percent respectively felt this was a *serious* problem in the community.

Alcohol use by *youth* was considered to be more of a problem at both the statewide and regional level where roughly ninety percent of respondents perceived use by *youth* as problematic to some degree. Forty-five percent (45.3%) of *Community Members* in the *Statewide* sample perceived *youth* alcohol use to be a *minor to moderate* problem, while Key Informants (62.2%) felt this was a *serious* problem. Overall, 53.1 percent of the *Region IV Community Member* participants felt that *youth* alcohol use was a *minor to moderate* issue and 58.5 percent of *Region IV Key Informants* felt that *youth* alcohol use was a *serious* problem.

Overall, 46.4 percent of the *Statewide* sample view the use of marijuana by *adults* as a *minor to moderate* and 42.5 percent perceived the use of marijuana by *youth* as a *minor to moderate* problem. Nearly one-third of the *Statewide* sample indicated they *don't know* the extent of the marijuana use by *adults* and/or *youth* (29.7% and 27.1% respectively) within their community.

Survey participants residing in Region IV displayed little variation from the statewide percentages. Overall, 45.5 percent of the *Region IV* sample views the use of marijuana by *adults* as a *minor to moderate*, while 43 percent perceived the use of marijuana by *youth* as a *minor to moderate* problem.

Again, nearly one-third of the Region IV sample indicated that they don't know the extent of marijuana use by adults and/or youth (33.1% and 31.3% respectively) within their community.

Both *Statewide* and *Region IV* respondents appear to lack knowledge on the presence and use of inhalants in their community. With *adult* use, 43.8 percent of *Statewide* respondents and 44.9 percent of the *Region IV* sample indicated *don't know* when asked to indicate how problematic inhalant use by adults was in their community. Similarly, 39.6 percent of *Statewide* respondents and 40.2 percent of *Region IV* respondents indicated *don't know* 

| en asked about youth use of inhalants. Notably, both <b>Statewide</b> and <b>Region IV</b> Key Informants ratings were very different from Community Members to between 43.9 percent and 63.4 percent perceived adult and youth inhalant use as a minor to moderate problem. | ; in |

Similar to perceptions of inhalant use, both *Statewide* and *Region IV* respondents, namely *Community Members*, appear to be less aware regarding the presence and use of cocaine in their community. With *adult* use, 48.8 percent of *Statewide Community Members* and 50.6 percent of *Region IV Community Members* indicated *don't know* the extent of cocaine use by *adults* was in their community. Similarly, 49.6 percent of *Statewide Community Members* and 50.2 percent of *Region IV Community Members* indicated *don't know* when asked about *youth* use of cocaine.

When asked to gauge over-the-counter drug abuse in their community, both *Statewide* and *Region IV Community Members* appeared to be less aware of such abuse among both *adults* and *youth* where at least forty percent reported they did not know the extent of the problem. On the other hand, both *Statewide* and *Region IV Key Informants* perceived the *adult* abuse of over-the-counter drugs as a *minor to moderate* problem with 52.6 percent and

54.9 percent respectively. With respect to *youth* abuse, 53.6 percent of *Statewide Key Informants* and 62.2 percent of *Region IV Key Informants* gauged the problem as *minor to moderate*.

Similarly, when asked to gauge prescription drug abuse in their community, both *Statewide* and *Region IV Community Members* appeared to be less aware of such abuse among both *adults* and *youth* where at least one-third (39.4% and 43.9%) reported they *don't know* the extent of the problem. On the other hand, both *Statewide* and *Region IV Key Informants* perceived the *adult* abuse of prescription drugs as a *minor to moderate problem* with 48.9

percent and 47.6 percent respectively. With respect to *youth* abuse, 54.1 percent of *Statewide Key Informants* and 52.4 percent of *Region IV Key Informants* gauged the problem as *minor to moderate*.

When respondents were asked to indicate their beliefs regarding the contribution of drugs/alcohol to injuries, 47.6 percent of the overall *Statewide* respondents indicated this was a *minor to moderate* problem, while 39.5 percent felt this was a *serious* problem in their community.

Of the *Region IV Community Member* respondents, 50.2% viewed the contribution of drug/alcohol use to crashes/injuries as a *minor to moderate* problem and 35.7 percent indicated this was *serious* problem. *Key Informant* respondents viewed this as more of an issue within the community, in that the majority (63.4%) specified this as a *serious* problem.

In sum, 88.8 percent of the *Region IV* respondents perceived the use of drugs and/or alcohol as a contributing factor to crashes or injuries.

When respondents were asked about the relationship between drug/alcohol use and crime, 41.5 percent of the *Statewide* respondents indicated that this was a *minor to moderate* problem, while 40.9 percent felt this was a *serious* problem within their community.

In terms of *Region IV Community Members*, 42.7 percent believed that the contribution of drug/alcohol use to crime was a *minor to moderate* problem and 40.7 percent indicated this was *serious* problem. Among the *Key Informants*, 68.3 percent perceived this as a *serious* problem within their community and 38.1 percent specified this was a *minor to moderate* problem.

In sum, 83.4 percent of *Community Members* and 92.7 percent of *Key Informants* in *Region IV* perceived drugs and/or alcohol as a contributing factor to crime.

## Section 3: Permissiveness of Attitudes toward AOD Use

This section focused on how tolerant community members may or may not be in relation to AOD issues. Items required participants to indicate the extent to which they either Agreed or Disagreed with the following statements: youth consuming alcohol at parties; youth drinking and driving; youth smoking cigarettes; youth alcohol and other drug experimentation; parents offering alcoholic beverages to youth in their own homes; community acceptance of underage drinking; driving while under the influence of alcohol and/or drugs; and riding in a motor vehicle with someone under the influence of alcohol and/or drugs.

**NOTE:** It should be kept in mind that the following tables are **NOT comparative** in nature. In other words, though presented side-by-side, the responses of the community members and those of the key informants are NOT being compared. The tables simply present a descriptive account about how each group responded to each question. For this section, response categories were collapsed into **AGREE** (to include agree or strongly agree) and **DISAGREE** (to include disagree or strongly disagree).

The statements contained in Table 3.1 were structured in such a way that agreement would indicate a permissive attitude toward drug and alcohol related issues. The results indicate that overall, *Region IV Community Members* and *Key Informants* are *not tolerant* of AOD use and related activity among adults and youth. A strong majority of respondents **disagreed** with following statements and thus, demonstrate this generalization:

- It is okay for youth to drink at parties as long as they don't get drunk (95.7% disagree-strongly disagree)
- Youth should be able to drink as long as they don't drive afterwards (96.3% disagree-strongly disagree)
- It is okay for youth to smoke cigarettes (98.1% disagree-strongly disagree)
- Youth who experiment with alcohol or other drugs almost always grow out of it (90.7% disagree-strongly disagree)
- It is okay for parents to offer their youth alcoholic beverages in their home (89.2% disagree-strongly disagree)
- It is okay for parents to offer alcoholic beverages in their home to youth other than their own (99.1% *disagree-strongly disagree*)
- Driving under the influence of drugs and/or alcohol is okay (99.1% disagree-strongly disagree)
- It is okay to ride in a motor vehicle with someone under the influence of drugs and/or drugs (99.1% disagree-strongly disagree)

On the other hand, when asked whether drinking among teenagers is acceptable within their community, 69 percent of respondents overall *disagree-strongly disagree* while 31 *percent agree-strongly agree*.

## Section 4: Community Support for AOD Prevention

Willingness to support AOD prevention initiatives was the focus of this section of the survey. Participants were asked to rank the items ranging from strongly disagree to strongly agree. Items included the following: a focus on law enforcement competency, support for educational and prevention programs, community commitment, advertising devices, tax issues related to alcohol and tobacco, the enforcement of drinking and driving laws, and laws prohibiting parents providing alcohol to their own children.

Additional items in this section assessed responses regarding support for the following statements: drinking age of 21 years; penalties for adults who provide alcohol to youth; compliance checks; laws prohibiting giving alcohol to your own children; and DUI checkpoints. Respondents were also questioned as to whether or not they support bans on the following: liquors advertisements on TV; beer and wine advertisements on TV; and billboard alcohol advertisements. The final series of questions asked respondents if they would be willing to attend the following events if they were alcohol-free: a party; wedding dance/reception; and sporting events.

**NOTE:** It should be kept in mind that the following tables are **NOT comparative** in nature. In other words, though presented side-by-side, the responses of the community members and those of the key informants are NOT being compared. The tables simply present a descriptive account about how each group responded to each question. Within this section, response categories were collapsed into **AGREE** (to include agree or strongly agree) and **DISAGREE** (to include disagree or strongly disagree).

Table 4.1 demonstrates that both *Community Members* and *Key Informants* agree on key issues ranging from enforcing minimum drinking violations to support for prevention programs and local initiatives. When *Region IV* respondents were asked to indicate the extent to which they either agree or disagree with increasing alcohol taxes, 59.8 percent of the overall respondents *agree-strongly agree*.

When *Region IV* respondents were asked to indicate the extent to which they either agree or disagree with increasing taxes on tobacco, 70.3 percent overall *agree-strongly agree*. Overall, *Region IV* responses to increasing alcohol and tobacco taxes paralleled those found at the *Statewide* level.

There is somewhat of a disparity in beliefs that support laws that prohibit giving alcohol to "your own" children. Nearly sixty-seven percent of the *Statewide Community Members* supported this law (66.8%); results from the *Key Informant* population indicated that 75 percent responded *yes* they would support this notion.

For *Region IV Community Member* respondents, 68 percent indicated that *yes* they would be in support of this type of law whereas *Key Informant* respondents appeared to be slightly more supportive in their responses, with 73.2 percent responding that *yes* they would be in support of a law prohibiting giving alcohol to "your own" children.

The results presented in Table 4.3 are very consistent across questions. Over sixty-three percent (range 63.9% to 66.1%) of the *Statewide* respondents support bans on television and billboards as forms of alcohol advertisements while one-third (range 32.7% to 34.7%) would not support such bans. Results from *Region IV* respondents were also very similar regarding all three questions related to alcohol advertising. Over sixty-two percent (range 61.8% to 64.3%) of the *Community Member* respondents were in support of banning alcohol advertisements on either television or billboards and just over one-third (range 33.6% to 35.7%) were not in support of banning this type of advertising.

The absence of alcohol at parties, wedding related activities, or sporting events would not curb attendance by an overwhelming majority of both the *Statewide* and *Region IV* respondents.

# Section 5: Access to Alcohol and Other Drugs

This series of questions focused on the availability of alcohol and other drugs by youth within the sampled communities. Respondents were asked to rank the level of difficulty in which youth can obtain alcohol under the following circumstances; liquor store accessibility, bar accessibility, at home accessibility, and alcohol provided by parents and/or other family members. Regarding the accessibility of illegal substances within the community, respondents were asked to rank how difficult it is for youth to access marijuana, inhalants, cocaine, methamphetamine, and hallucinogens.

**NOTE:** It should be kept in mind that the following tables are **NOT comparative** in nature. In other words, though presented side-by-side, the responses of the community members and those of the key informants are NOT being compared. The tables simply present a descriptive account about how each group responded to each question.

One-third (33.3%) of *Statewide Community Members* perceived marijuana as *not* at all difficult for adults/youth to obtain in their community, whereas 45.3 percent felt access was *slightly/somewhat* difficult. Among the *Key Informants*, almost half (49.9%) perceived marijuana was *not* at all difficult for adults/youth to access, while 43.7 percent felt accessing marijuana was *slightly/somewhat* difficult.

Within *Region IV*, 29.9 percent of *Community Member* respondents perceived access to marijuana as *not at all* difficult for adults/youth to obtain, 47.7 percent felt access was *slightly/somewhat* difficult, and only 12 percent perceived this to be *quite/extremely* difficult. Nearly half (42.7%) of *Key Informant* respondents perceived access to marijuana as *not at all* difficult for adults/youth to obtain, while 45.1 percent perceived access to marijuana as *slightly/somewhat* difficult.

One quarter (24.1%) of *Statewide Community Member* respondents perceived access to methamphetamine as *not at all* difficult to access, whereas 48.7 percent believed that access was *slightly/somewhat* difficult. Among the *Key Informants*, 30.5 percent believed that methamphetamine was *not at all* difficult to access, over half (58.3%) believed that access was *slightly/somewhat* difficult, and 8.1 percent responded that methamphetamine was *quite/extremely* difficult to access.

Within *Region IV*, 24.5 percent of *Community Member* respondents perceived access to methamphetamine as *not at all* difficult to access, while 49 percent believed that access was *slightly/somewhat* difficult. Over half (57.3%) of *Key Informant* respondents indicated that access to methamphetamine was *slightly/somewhat* difficult, whereas 25.6 percent believed that accessing methamphetamine was *not at all* difficult.

Respondents perceived access to cocaine and hallucinogens in a similar way (i.e., *slightly/somewhat* difficult to access) although one-quarter thought access would be *quite/extremely* difficult. Overall, inhalants were perceived as the most accessible to youth and adults by 54.4 percent of *Statewide* respondents and 54.5 percent of *Region IV* respondents.

## Section 6: Perception of Community Commitment

Lastly, participants were asked to rank the community's overall commitment to addressing the perceived problems of youth alcohol and substance use. The questions focused on the importance of preventing alcohol and drug use among youth, concern for the availability of sufficient prevention programs, the most effective method for achieving drug free youth, through educating youth, parents, or community members, the presence of leaders within the community willing to address these issues, where to seek assistance within the community regarding these matters, the presence of a community action plan, and primary sources of information regarding crime.

**NOTE:** It should be kept in mind that the following tables are **NOT comparative** in nature. In other words, though presented side-by-side, the responses of the community members and those of the key informants are NOT being compared. The tables simply present a descriptive account about how each group responded to each question. Within this section, response categories were collapsed into **AGREE** (to include agree or strongly agree) and **DISAGREE** (to include disagree or strongly disagree).

When asked whether *Statewide* and *Region IV* respondents considered alcohol and other drug use prevention among youth as important, a strong majority (96.6% and 95.7% respectively) *agree-strongly agree*. When asked whether they are concerned about the sufficiency of their community's AOD abuse prevention programs, 79.3 percent of *Statewide* respondents and 78 percent of *Region IV* respondents indicated that they were concerned.

Finally, at least eighty-nine percent of the *Statewide* and *Region IV* respondents agree that alcohol and drug free youth can best be achieved by: 1) educating youth themselves; 2) educating parents; and 3) educating the community.

#### Dear Community Member:

Congratulations! You have been selected to participate in the enclosed survey designed to gauge your community's perceptions of alcohol and other drug use. As our thank-you for completing this survey, you have the opportunity to enter your name in a drawing to win one of several **pre-paid gas cards worth up to \$500**.

The Rural Crime and Justice Center (RCJC), along with the North Dakota Department of Human Services, has designed this survey to discuss alcohol and other drug (AOD) use in your community. With your help, we can identify perceptions of the AOD problem, attitudes toward AOD use, support for AOD prevention, adolescent access to AOD, and level of commitment within *your* community to address these issues.

It will only take 5-10 minutes to complete this brief survey. Your responses are confidential and anonymous, and will be used to develop effective responses to AOD issues at the community level. Following completion, please return the survey in the enclosed pre-paid return envelope by **June 15, 2008**. Results of the survey will be available to the public this fall. If you would like to participate in the drawing for a pre-paid gas card, please refer to the enclosed postcard for more information.

Your support and participation are greatly appreciated. If you have any further questions, please feel free to contact me at 1-800-777-0750, ext. 3441.

Sincerely,

Trista Ortynsky Project Coordinator

Rural Crime and Justice Center

Trista Ortynsky

## Please refer to the following information regarding your participation in this survey:

The RCJC follows the guidelines stated in the United States Code of Federal Regulations 45 CFR 46.116. Any information gathered in this survey is viewed as confidential. The RCJC will follow all necessary protocol to ensure the confidentiality and integrity of all information supplied. Each survey will remain anonymous and identifiable only to the selected researchers assigned to this project. All information obtained will be restricted in a password protected database. Hard copies are stored in a protected file in a secure location. Computer and hard copy files pertaining to this data collection device will be destroyed three years following the completion of the project. Such procedures are necessary to guarantee your anonymity and to decrease any risk to your involvement as a contributor.

This survey has been approved by the Institutional Review Board (IRB) at Minot State University. For additional information regarding IRB regulations, please contact Dr. Margi Coxwell, IRB Chair, at (701) 858-3125. Please understand that completion of this survey constitutes that you fully comprehend the information contained in this letter, you provide consent to partake in completion of this survey, you fully understand that all the information you provide in this survey will be kept confidential, and you have the choice to withdraw from participation in this survey at any time.

**INTRODUCTION**: North Dakota's Department of Human Services has designed a Community Readiness survey to evaluate alcohol, and other drug (AOD) use. This survey is intended to measure **perceptions** about AOD use as well as current prevention efforts. The results will be used to help identify how prepared communities are to take action on AOD, and utilized by prevention specialists and community members to decide the best strategies for North Dakota communities.

Keeping "your community" in mind, please indicate your choice by placing a in the appropriate box. For open-ended questions, please write your thoughts in the space provided.

## **Section 1: Demographics**

This information will be used for statistical purposes only. Please mark your answers in the appropriate boxes.
