(Including breakdowns by region and urban/rural)

Background Information

The Youth Risk Behavior Survey (YRBS) was developed by the Division of Adolescent and School Health (DASH), National Center for Chronic Disease Prevention and Health Promotion, and the Centers for Disease Control and Prevention (CDC) in collaboration with several representatives from state and local health education agencies and other federal agencies.

The YRBS is designed to focus on behaviors related to the leading causes of death and disability among youth and young adults and to assess how these risk behaviors change over time.

It is a self-reporting survey to measure priority health-risk behaviors that fall mainly into eight categories:

- Unintentional injuries and violence
- Tobacco use
- Alcohol and other drug use
- Sexual behaviors (that result in HIV infection, other sexually transmitted diseases (STDs), and unintended pregnancies)
- Dietary behaviors
- Physical activity
- Social capital (connections with others)
- Other health factors

These behaviors are often established during youth and extend into adulthood and are frequently interrelated.

The YRBS and Youth Tobacco Survey (YTS) are conducted biannually in the late winter/early spring of odd years. Therefore, this study will be conducted again in the late winter/early spring of 2023, 2025, 2027, etc. *To avoid the risk of overburdening your teachers and students with surveys, we strongly recommend you encourage the schools in your area to reserve January and February of odd years for conducting the YRBS and YTS only!*

North Dakota Statewide Results, Limitations, and Contact Information

Statewide Results & Limitations

The statewide data is collected by randomly selecting school buildings, as well as classes within each building. Given that these schools/classes were selected at random and a high participation rate was achieved, the CDC was able to generate weighted data that is highly representative of <u>all</u> high school students (Grades 9-12) from eligible¹, public high schools in the state of North Dakota. Therefore, the statewide results do <u>not</u> have <u>any</u> limitations and <u>can</u> be used to (1) project the results to <u>all</u> public high school students and (2) compare changes in results from one survey year to another.

Contact Information for the Statewide Results

The 2021 High School Youth Risk Behavior Survey (YRBS) results are available on the Department of Public Instruction's Safe and Healthy Schools website at: https://www.nd.gov/dpi/districtsschools/safety-health/youth-risk-behavior-survey

If you have any questions about the statewide YRBS information or desire additional information, please feel free to contact:

Robin Lang YRBS Data Manager ND Department of Public Instruction Email: roclang@nd.gov

Telephone: 701-328-2265

¹ During the 2020-2021 school year, roughly 32,838 students (Grades 9-12) attended "eligible" North Dakota public high schools. To be eligible for the 2021 YRBS High School Survey, a school building was required to have at least 10 students enrolled in Grades 9-12. The North Dakota YRBS survey was completed by 7,537 high school students (Grades 9-12) from 100 North Dakota high schools during the late winter/early spring of 2021, of which 2,009 were students from schools/classes that were "selected" for the statewide CDC sample and 5,528 were students from schools/classes that "voluntarily" participated in the YRBS. Data from <u>all</u> high school student surveys are included in the Winkelman Consulting results.

(Including breakdowns by region and urban/rural)

Regional and Urban-Rural Results, Limitations, and Contact Information

Regional and Urban-Rural Results & Limitations

The regional and urban-rural data apply <u>only</u> to those schools/classes participating in the survey during that year. We <u>cannot</u> say the results that include "voluntary" data represent <u>all</u> schools/students within a region or segment; we can simply say they represent <u>mainly</u> the schools/classes that <u>volunteered</u> to participate in the survey. Therefore, changes that occur within a region or segment from one survey year to another <u>may not</u> represent true changes in behavior within the region or segment. The changes <u>may</u> simply result because of differences between the kinds of schools/classes that chose to participate in one survey year versus another.

As was noted in the footnote on the previous page, 7,537 high school students (Grades 9-12) participated in the 2021 North Dakota High School YRBS, of which 5,528 were students from schools/classes that "voluntarily" participated in the YRBS. Therefore, the vast majority of the data used for the regional and urban-rural results was <u>not</u> collected from randomly selected school buildings and/or classes. Given that most of these schools/classes "volunteered" to participate and were <u>not</u> selected at random, even though a high participation rate was achieved, Winkelman Consulting is <u>not</u> able to generate weighted data that is representative of <u>all</u> high school students (Grades 9-12) from eligible, public high schools in either the state or an individual region or segment. Because of this, *the regional and urban-rural data <u>cannot</u> be used to (1) project the results to <u>all</u> public high school students in a region or segment or (2) compare changes in results for a region or segment from one survey year to another. Also, noticeable differences may be seen between the results for a region/segment and the statewide data simply because the students from schools/classes that completed "voluntary" YRBS surveys are more (or less) likely to have a certain behavior than the "average" student represented by the random, weighted, representative statewide data.*

Contact Information for the Regional and Urban-Rural Results

If you have any questions about the enclosed regional or urban-rural results or desire additional detail, please feel free to contact:

Mobile: 701-799-0877

School Results, Limitations, and Contact Information

Parameters for School Results

Schools that met the requirements² received a similar report that included their 2021 YRBS high school (Grades 9-12) results! To receive results for an individual question, however, three or more students from the school must have reported the behavior being measured by that question.

Contact Information for School Results

If any schools have questions about their school results or desire additional analysis (tables by grade/gender³, significance tests, or data weighting as noted in the footnotes below), please feel free to have them contact Mark Winkelman at Winkelman Consulting (see the contact information above).

² Due to federal and state confidentiality requirements, YRBS high school (Grades 9-12) results will be provided <u>only</u> to schools that <u>both</u> requested the larger "voluntary" sample <u>and</u> returned at least 10 completed high school surveys. If a school did <u>not</u> participate in the larger "voluntary" sample and/or did <u>not</u> return at least 10 completed high school surveys, they will <u>not</u> receive high school results for their school. However, they can still access the 2021 North Dakota Statewide High School YRBS results on the Department of Public Instruction's Safe and Healthy Schools website (https://www.nd.gov/dpi/districtsschools/safety-health/youth-risk-behavior-survey).

³ To receive additional analysis by grade, gender, etc. for a minimal fee, there must be at least 10 countable surveys in each grade segment, gender segment, etc. If a grade or gender segment does not have 10 countable surveys, grade segments can be combined to attain the required number of countable surveys. For example, if Grade 10 had seven countable surveys and Grade 11 had six countable surveys, a segment that combines Grades 10-11 could be provided.

(Including breakdowns by region and urban/rural)

Format, Question Order, Abbreviations & a Reminder Related to "Voluntary" Data

At the end of each question (or calculated variable) on the following pages, we have provided both a ND [NDHqn# (or NDHqnname)] and a CDC [CDC QN# (or CDC QNname)] question number or variable name. The ND question number indicates the question number as it appeared on the 2021 North Dakota High School (Grades 9-12) YRBS questionnaire. The CDC question number (or variable name) indicates the question number (or variable name) assigned to the question (or variable) by the CDC. Please note that the results on the following pages are listed in an order similar to that in which the statewide results will be presented on the Department of Public Instruction website.

Remember, when looking at the Region or Urban-Rural data, please note that we cannot say the results that include "voluntary" data represent <u>all</u> schools/students within a region or segment; we can simply say they represent <u>mainly</u> the schools/classes that <u>volunteered</u> to participate in the survey. Therefore, changes that occur within a region or segment from one survey year to another <u>may not</u> represent true changes in behavior within the region or segment. The changes <u>may</u> simply result because of differences between the kinds of schools that chose to participate in one survey year versus another.

Prior to 2013, Department of Human Services regions were used for the regional results. Beginning in 2013, however, YRBS stakeholders decided to use Regional Education Association (REA) regions for the regional results. Therefore, the Region/Urban-Rural data is presented for the following categories:

- Regional Education Association (REA) regions
 - Central Region Education Association (CREA): Bismarck-Mandan-Minot Area
 - o Great Northwest Education Cooperative (GNWEC): Williston Area
 - o North Central Education Cooperative (NCEC): Bottineau-Rugby Area
 - Northeast Education Services Cooperative (NESC): Devils Lake Area
 - o Roughrider Education Services Program (RESP): Dickinson Area
 - o Red River Valley Education Cooperative (RRVEC): Grand Forks Area
 - o South East Education Cooperative (SEEC): Fargo-Jamestown Area
 - Schools that are <u>not</u> a member of a REA: No defined area
 - NOTE: Because of the small number of Non-REA school districts that participated in this study, no results are provided for Non-REA school districts.
- <u>Urban-Rural categories</u>
 - o Urban Towns: 1,000 or more students in grades K-12 within the community
 - Rural Towns: Less than 1,000 students in grades K-12 within the community

The last page of this report provides a list of Regional Education Associations and their member school districts (as listed on their websites on March 24, 2022). For more information on school district membership for each Regional Education Association (REA) and other resources, please refer to the following websites:

- http://www.ndrea.org
- Map: http://www.ndrea.org/index.php?id=3
- Contact Information: http://www.ndrea.org/index.php?id=7

CDC Changes to YRBS Variable Names, Calculations and Descriptive Text

When reviewing the 2021 YRBS results, please note that, in some years, CDC made many changes to (1) the names (variable labels) it assigned to variables, (2) the manner in which results for a variable were calculated, and/or (3) the text used to describe the context for the results of a question. This will make it difficult for a school (if not impossible) to easily make direct apples-to-apples comparisons to their YRBS results from previous survey years. Therefore, in roughly four to eight weeks, Winkelman Consulting will send each participating school a second YRBS report that re-analyzes all of their past data using CDC's 2021 analysis parameters. This will make it very easy for each participating school to identify the changes in their 2021 YRBS results compared to previous survey years. If there is anything else we can do to assist you (or a school in your area) in better understanding and analyzing current and past YRBS results, feel free to contact Winkelman Consulting at any time!
