Protect yourself, your family and your patients!

Protect yourself and prevent the spread of pathogens with the new infection prevention and control (IPC) curriculum specifically designed for EMS personnel, developed by UMass Memorial Medical Center and the Massachusetts Department of Public Health.

EMS personnel face a variety of IPC challenges which can differ from those of facility-based healthcare workers. In the pre-hospital environment, EMS personnel:

- Treat patients in the field, transporting to and from a variety of healthcare settings
- Manage unknown diagnoses
- Handle rapidly evolving situations

These factors put EMS personnel at higher risk of exposure to pathogens while performing their job, but also in an important position to PREVENT healthcare-associated infections.
