Last updated by Levi Schlosser on 11/15/2022

Week 45

Laboratory-confirmed influenza cases have more than doubled from the previous week, and aggregated laboratory positivity has increased to 6.23% for the state. Nearly all markers for flu activity are trending upwards, with the exception of influenza deaths, which remain at zero. Nationwide, reported hospitalizations have increased over the last several weeks. including those due to respiratory syncytial virus (RSV) Overall, respiratory disease attributed to both influenza, COVID-19, and RSV remains elevated.

2022-2023 Influenza Weekly Report

North Dakota Department of Health and Human Services

Week 45 Last updated by Levi Schlosser on 11/15/2022

Laboratory-confirmed influenza is a reportable disease in North Dakota. Influenza "cases" include people that have tested positive for influenza in a healthcare setting. It does not include people with influenza who did not seek healthcare, or were diagnosed without a lab test, which is common. The true number of people in North Dakota is underrepresented, but case data allows us where influenza is circulating and in what populations. It also provides context regarding how the current season compares with previous seasons. Find more information about cases on ndflu.com

Influenza Cases by Gender

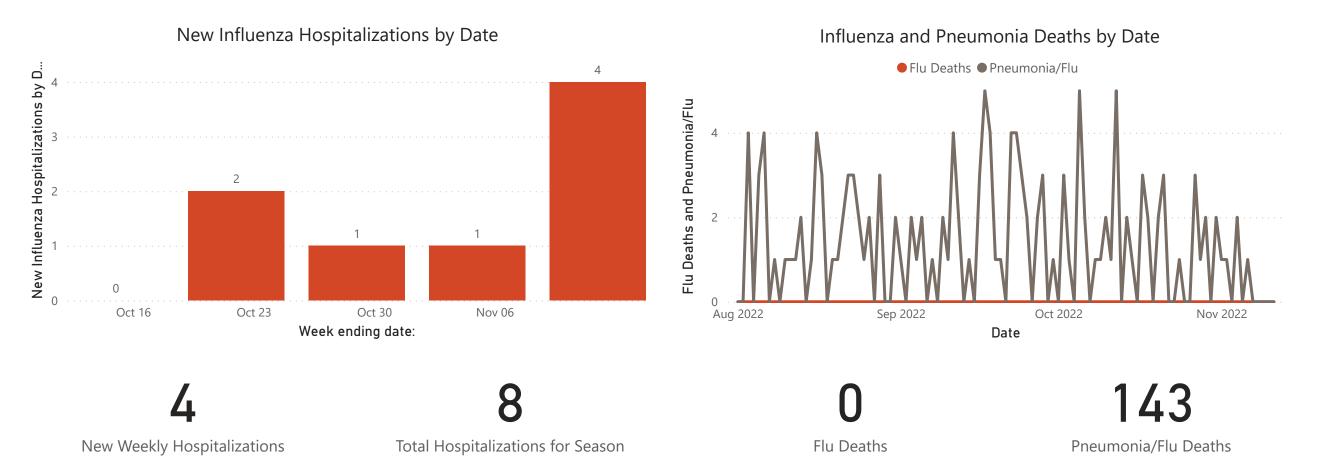

Total Influenza Cases by County

North Dakota Department of Health and Human Services

Influenza Hospitalization information is collected via daily aggregated reports to NDHHS. Because this surveillance methodology is new this year, hospitalization numbers this year may not be comparable to previous years.

Influenza Death information is obtained from Vital Records, and is based on the listed cause of deathon the individuals death certificate.

Percent ILI

2022-2023 Influenza Weekly Report

Last updated by Levi Schlosser on 11/15/2022

Outpatient Influenza-like Illness (ILI) NDHHS participates in the national U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet). Data from participating outpatient providers in North Dakota are pooled to create a state-wide estimate for the weekly percent of healthcare visists due to influenza-like illness (ILI). Patients presenting with a fever of 100 degrees or greater AND a cough and/or sore throat are considered to have ILI. For more information on state and national ILINet data, see <u>FluView Interactive</u>

Percent ILI by Week

Sentinel Laboratory Data NDHHS receives influenza and RSV testing data from participating sentinel laboratories across the state. The total number of positive tests and the total number of tests conducted are reported and used to create a state-wide percent positivity statistic. RSV is not a reportable condition in North Dakota, but

During the influenza season, increases in the **school absenteeism** data cab be used as an early indicator for influenza circulation. The NDDoH received absenteeism data from a majority of schools in the state. Data here include absences for all reasons.

During the influenza season, **influenza outbreaks** are common anywhere people gather, including schools, child care centers, long-term care facilities, and health care facilities. Outbreaks of influenza-like illness may be reported to the NDDoH. The following outbreaks have been reported this season.

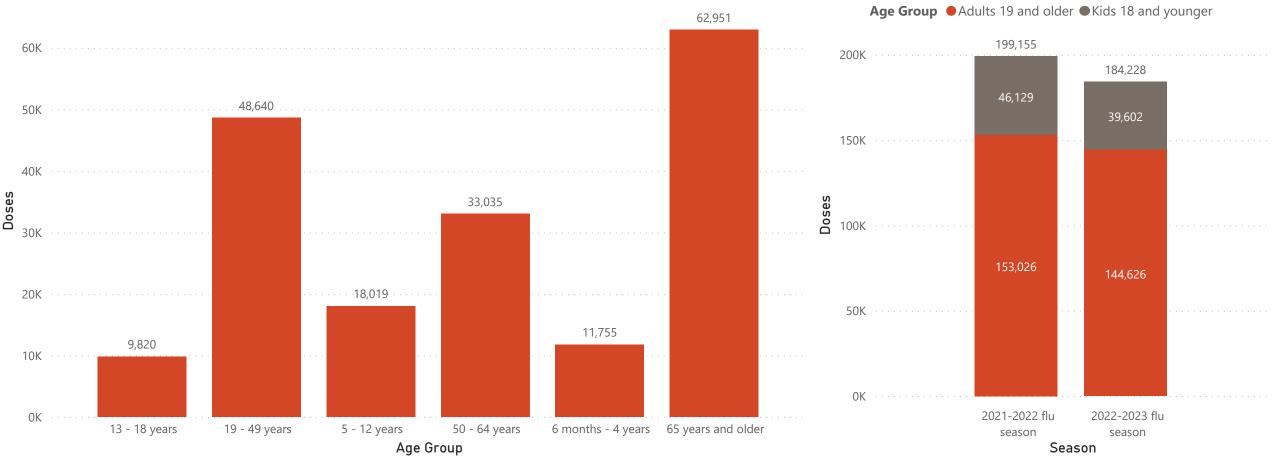

Congregate Setting Outbreaks, by Date

2022-2023 Influenza Weekly Report North Dakota Department of Health and Human Services

Influenza vaccine doses administered data from the North Dakota Immunization Information System (NDIIS) includes all administered doses of flu vaccine documented in the NDIIS to records with a North Dakota address. Adult immunizations do not have to be reported to the NDIIS so there may be more influenza vaccine doses being administered that are not reported to the NDIIS. Age groups are determined base on age at time of vaccination.

NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received at least one dose of influenza vaccine so far this flu season. NDIIS records included in **statewide coverage rates** must have a North Dakota address.

Adult immunizations do not have to be reported to the NDIIS so adult coverage rates may be higher.
