## Week 1

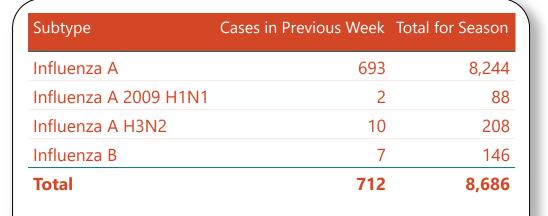

Last updated by Levi Schlosser on 01/10/2023

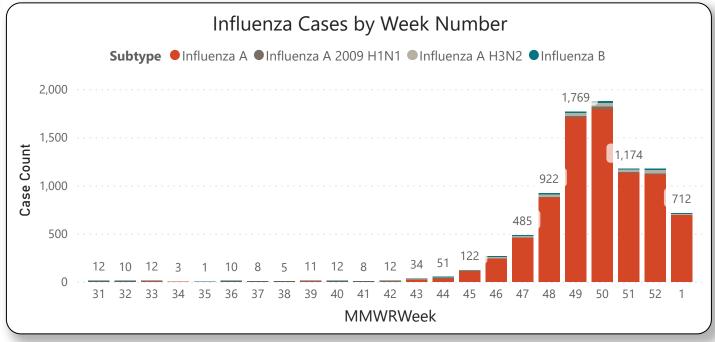

### North Dakota Department of Health and Human Services

Influenza activity has again decreased from the previous week. Outpatient ILI, while still above our seasonal baseline, has decreased yet again, and school absenteeism remains low following the return from holiday break. Severe illness remains elevated with 35 new flurelated hospitalizations and 1 new flu death. Nationwide, flu activity has seen reported decreases in some areas of the country.

As we enter the new year, iinfluenza vaccination remains the best tool to protect against severe illness/outcomes. It is not too late to get your flu vaccine! For more information regarding flu vaccination, please visit <a href="https://example.com/health.nd.gov/immunize">health.nd.gov/immunize</a>

	Last Week	Season Total
New Influenza Cases:	712	8,686
Outpatient Visits for Influenza-like Illness:	4.94%	4.40%
Laboratory Specimens Positive for Influenza:	15.96%	10.15%
Percentage of Students Absent from School:	11.31%	12.73%
New Hospitalizations due to Influenza:	35	309
New Deaths due to Influenza:	1	15

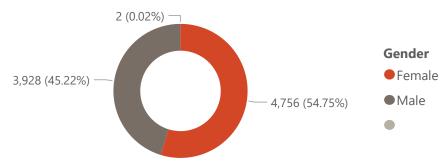

#### Week 1

## North Dakota Department of Health and Human Services

Laboratory-confirmed influenza is a reportable disease in North Dakota. Influenza "cases" include people that have tested positive for influenza in a healthcare setting. It does not include people with influenza who did not seek healthcare, or were diagnosed without a lab test, which is common. The true number of people in North Dakota is underrepresented, but case data allows us where influenza is circulating and in what populations. It also provides context regarding how the current season compares with previous seasons. Find more information about cases on ndflu.com

**Influenza Hospitalization** information is collected via daily aggregated reports to NDHHS. Because this surveillance methodology is new this year, hospitalization numbers this year may not be comparable to previous years.

**Influenza Death** information is obtained from Vital Records, and is based on the listed cause of deathon the individuals death certificate.

#### North Dakota Department of Health and Human Services

Outpatient Influenza-like Illness (ILI) NDHHS participates in the national U.S.

Outpatient Influenza-like Illness Surveillance Network (ILINet). Data from participating outpatient providers in North Dakota are pooled to create a state-wide estimate for the weekly percent of healthcare visists due to influenza-like illness (ILI). Patients presenting with a fever of 100 degrees or greater AND a cough and/or sore throat are considered to have ILI. For more information on state and national ILINet data, see FluView Interactive

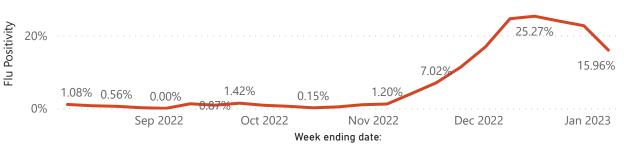

**Sentinel Laboratory Data** NDHHS receives influenza and RSV testing data from participating sentinel laboratories across the state. The total number of positive tests and the total number of tests conducted are reported and used to create a state-wide percent positivity statistic. RSV is not a reportable condition in North Dakota, but

#### Percent ILI by Week

Week Ending Date:	Total # of Patients Seen for Any Reason	Percent ILI
Saturday, December 03, 2022	3,867	6.28%
Saturday, December 10, 2022	2,789	14.27%
Saturday, December 17, 2022	4,131	12.35%
Saturday, December 24, 2022	2,950	8.75%
Saturday, December 31, 2022	3,694	7.72%
Saturday, January 07, 2023	3,745	4.94%
Total	21,176	8.87%

#### Flu Positivity by Week

Week ending date:	Total # of Specimens Tested	Flu Positivity	RSV Positivity
Saturday, December 03, 2022	2,490	16.87%	23.96%
Saturday, December 10, 2022	976	24.59%	18.30%
Saturday, December 17, 2022	3,866	25.27%	18.55%
Saturday, December 24, 2022	1,972	23.94%	14.06%
Saturday, December 31, 2022	1,407	22.67%	10.24%
Saturday, January 07, 2023	1,303	15.96%	12.23%
Total	12,014	21.94%	17.65%

North Dakota Department of Health and Human Services

During the influenza season, increases in the **school absenteeism** data cab be used as an early indicator for influenza circulation. The NDDoH received absenteeism data from a majority of schools in the state. Data here include absences for all reasons.

### Percent of Children Absent from School by Date

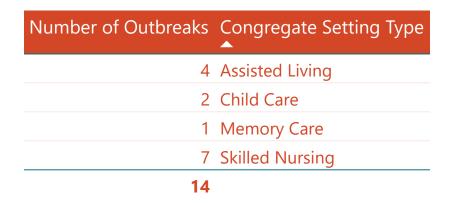

Week End Date	Total Enrollment	Percent Absent
Saturday, December 10, 2022	124,822	20.82%
Saturday, December 17, 2022	124,966	18.28%
Saturday, December 24, 2022	122,142	12.99%
Saturday, December 31, 2022	4,498	0.00%
Saturday, January 07, 2023	125,783	11.31%

During the influenza season, **influenza outbreaks** are common anywhere people gather, including schools, child care centers, long-term care facilities, and health care facilities. Outbreaks of influenza-like illness may be reported to the NDDoH. The following outbreaks have been reported this season.

### Congregate Setting Outbreaks, by Date

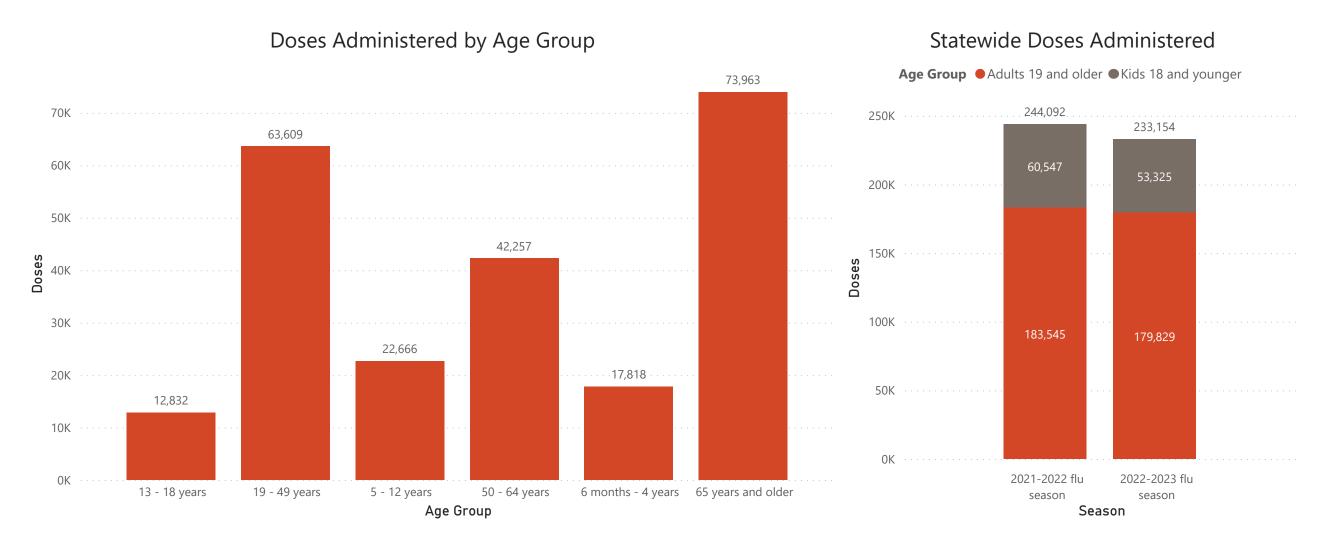

Week 1

North Dakota Department of Health and Human Services

Last updated by Levi Schlosser on 01/10/2023

**Influenza vaccine doses administered** data from the North Dakota Immunization Information System (NDIIS) includes all administered doses of flu vaccine documented in the NDIIS to records with a North Dakota address. Adult immunizations do not have to be reported to the NDIIS so there may be more influenza vaccine doses being administered that are not reported to the NDIIS. Age groups are determined base on age at time of vaccination.

North Dakota Department of Health and Human Services

NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received at least one dose of influenza vaccine so far this flu season. NDIIS records included in **statewide coverage rates** must have a North Dakota address.

Adult immunizations do not have to be reported to the NDIIS so adult coverage rates may be higher.
