Week 2

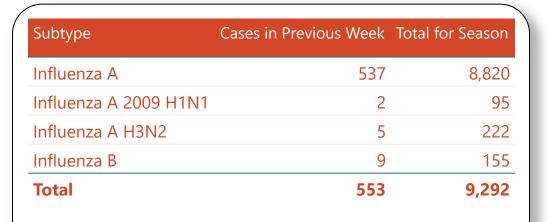

Last updated by Levi Schlosser on 01/17/2023

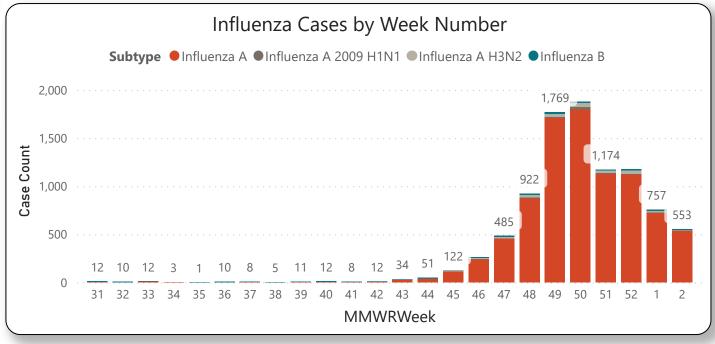

North Dakota Department of Health and Human Services

Influenza activity has again decreased from the previous week,. Outpatient ILI has slightly increased from the previous week, despite influenza test positivity (as reported by our sentinel laboratories in the state) decreasing. Severe illness remains elevated with 25 new flu-related hospitalizations and 1 new flu death. Nationwide, flu activity has seen reported decreases in multiple areas of the country.

As we enter the new year, iinfluenza vaccination remains the best tool to protect against severe illness/outcomes. It is not too late to get your flu vaccine! For more information regarding flu vaccination, please visit health.nd.gov/immunize

	Last Week	Season Total
New Influenza Cases:	553	9,292
Outpatient Visits for Influenza-like Illness:	6.27%	4.46%
Laboratory Specimens Positive for Influenza:	15.21%	10.85%
Percentage of Students Absent from School:	13.68%	12.82%
New Hospitalizations due to Influenza:	25	334
New Deaths due to Influenza:	1	17

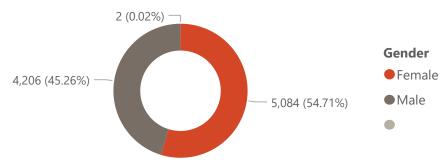

Week 2

North Dakota Department of Health and Human Services

Laboratory-confirmed influenza is a reportable disease in North Dakota. Influenza "cases" include people that have tested positive for influenza in a healthcare setting. It does not include people with influenza who did not seek healthcare, or were diagnosed without a lab test, which is common. The true number of people in North Dakota is underrepresented, but case data allows us where influenza is circulating and in what populations. It also provides context regarding how the current season compares with previous seasons. Find more information about cases on ndflu.com

Influenza Hospitalization information is collected via daily aggregated reports to NDHHS. Because this surveillance methodology is new this year, hospitalization numbers this year may not be comparable to previous years.

Influenza Death information is obtained from Vital Records, and is based on the listed cause of deathon the individuals death certificate.

North Dakota Department of Health and Human Services

Outpatient Influenza-like Illness (ILI) NDHHS participates in the national U.S.

Outpatient Influenza-like Illness Surveillance Network (ILINet). Data from participating outpatient providers in North Dakota are pooled to create a state-wide estimate for the weekly percent of healthcare visists due to influenza-like illness (ILI). Patients presenting with a fever of 100 degrees or greater AND a cough and/or sore throat are considered to have ILI. For more information on state and national ILINet data, see FluView Interactive

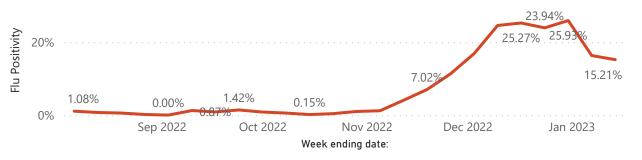

Sentinel Laboratory Data NDHHS receives influenza and RSV testing data from participating sentinel laboratories across the state. The total number of positive tests and the total number of tests conducted are reported and used to create a state-wide percent positivity statistic. RSV is not a reportable condition in North Dakota, but

Percent ILI by Week

Week Ending Date:	Total # of Patients Seen for Any Reason	Percent ILI
Saturday, December 10, 2022	2,789	14.27%
Saturday, December 17, 2022	4,131	12.35%
Saturday, December 24, 2022	2,950	8.75%
Saturday, December 31, 2022	3,694	7.72%
Saturday, January 07, 2023	3,745	4.94%
Saturday, January 14, 2023	2,695	6.27%
Total	20,004	9.02%

Flu Positivity by Week

Week ending date:	Total # of Specimens Tested	Flu Positivity	RSV Positivity
Saturday, December 10, 2022	976	24.59%	18.30%
Saturday, December 17, 2022	3,866	25.27%	18.55%
Saturday, December 24, 2022	1,972	23.94%	14.06%
Saturday, December 31, 2022	1,901	25.93%	10.10%
Saturday, January 07, 2023	1,824	16.34%	11.55%
Saturday, January 14, 2023	1,394	15.21%	8.82%
Total	11,933	22.56%	14.57%

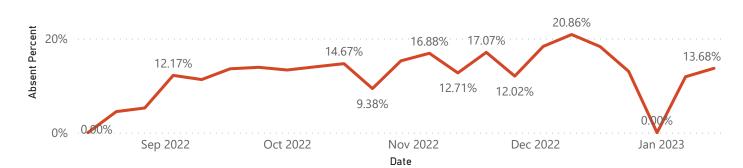

Week 2

Last updated by Levi Schlosser on 01/17/2023

North Dakota Department of Health and Human Services

During the influenza season, increases in the **school absenteeism** data cab be used as an early indicator for influenza circulation. The NDDoH received absenteeism data from a majority of schools in the state. Data here include absences for all reasons.

Percent of Children Absent from School by Date

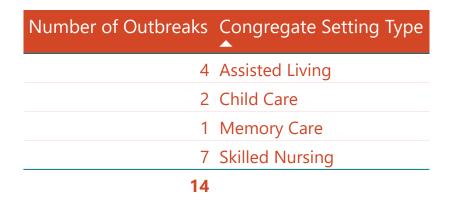

Week End Date	Total Enrollment	Percent Absent
Saturday, December 17, 2022	124,514	18.29%
Saturday, December 24, 2022	121,705	13.04%
Saturday, December 31, 2022	4,498	0.00%
Saturday, January 07, 2023	125,364	11.89%
Saturday, January 14, 2023	125,761	13.68%

During the influenza season, **influenza outbreaks** are common anywhere people gather, including schools, child care centers, long-term care facilities, and health care facilities. Outbreaks of influenza-like illness may be reported to the NDDoH. The following outbreaks have been reported this season.

Last updated by Levi Schlosser on 01/17/2023

Influenza vaccine doses administered data from the North Dakota Immunization Information System (NDIIS) includes all administered doses of flu vaccine documented in the NDIIS to records with a North Dakota address. Adult immunizations do not have to be reported to the NDIIS so there may be more influenza vaccine doses being administered that are not reported to the NDIIS. Age groups are determined base on age at time of vaccination.

North Dakota Department of Health and Human Services

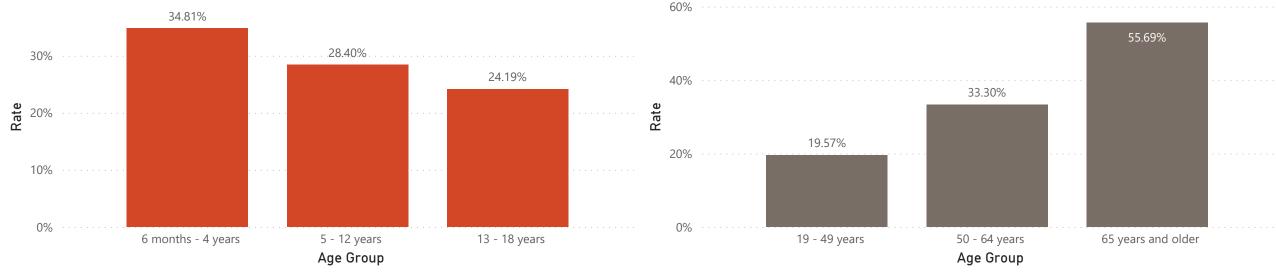

NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received at least one dose of influenza vaccine so far this flu season. NDIIS records included in **statewide coverage rates** must have a North Dakota address.

Adult immunizations do not have to be reported to the NDIIS so adult coverage rates may be higher.
