2022-2023 Influenza Weekly Report

North Dakota Department of Health and Human Services

Last updated by Levi Schlosser on 05/02/2023

Week 17

Seasonal influenza activity remains low, both in North Dakota as well as nationwide. While flu activity is low, one new respiratory disease outbreak was reported in the previous week, As we approach the end of the influenza season, the North Dakota Department of Health and Human Services encourages everyone to take everyday preventative steps to reduce the spread of influenza and other respiratory diseases.

2022-2023 Influenza Weekly Report

North Dakota Department of Health and Human Services

Week 17 Last updated by Levi Schlosser on 05/02/2023

Laboratory-confirmed influenza is a reportable disease in North Dakota. Influenza "cases" include people that have tested positive for influenza in a healthcare setting. It does not include people with influenza who did not seek healthcare, or were diagnosed without a lab test, which is common. The true number of people in North Dakota is underrepresented, but case data allows us where influenza is circulating and in what populations. It also provides context regarding how the current season compares with previous seasons. Find more information about cases on ndflu.com

Influenza Hospitalization information is collected via daily aggregated reports to NDHHS. Because this surveillance methodology is new this year, hospitalization numbers this year may not be comparable to previous years.

Influenza Death information is obtained from Vital Records, and is based on the listed cause of death on the individuals death certificate. For more information about the seasonal death estimates, <u>click here.</u>

North Dakota Department of Health and Human Services

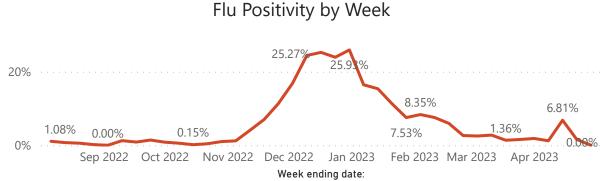

Week 17 Last updated by Levi Schlosser on 05/02/2023

Outpatient Influenza-like Illness (ILI) NDHHS participates in the national U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet). Data from participating outpatient providers in North Dakota are pooled to create a state-wide estimate for the weekly percent of healthcare visists due to influenza-like illness (ILI). Patients presenting with a fever of 100 degrees or greater AND a cough and/or sore throat are considered to have ILI. For more information on state and national ILINet data, see <u>FluView Interactive</u>

Sentinel Laboratory Data NDHHS receives influenza and RSV testing data from participating sentinel laboratories across the state. The total number of positive tests and the total number of tests conducted are reported and used to create a state-wide percent positivity statistic. RSV is not a reportable condition in North Dakota, but aggregate positivity is reported by participating sentinel laboratories.

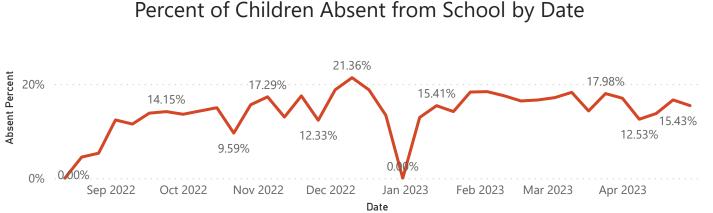

Week Ending Date:	Total # of Patients Seen for Any Reason	Percent ILI
Saturday, March 25, 2023	3,760	2.15%
Saturday, April 01, 2023	6,856	2.54%
Saturday, April 08, 2023	3,515	2.79%
Saturday, April 15, 2023	3,778	1.88%
Saturday, April 22, 2023	3,852	2.99%
Saturday, April 29, 2023	3,423	3.33%
Total	25,184	2.59 %

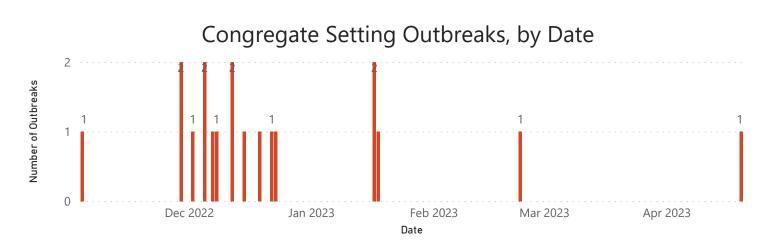

Week ending date:	Total # of Specimens Tested	Flu Positivity	RSV Positivity
Saturday, March 25, 2023	1,276	1.57%	1.73%
Saturday, April 01, 2023	704	1.85%	1.80%
Saturday, April 08, 2023	740	1.22%	0.00%
Saturday, April 15, 2023	499	6.81%	0.00%
Saturday, April 22, 2023	382	1.57%	0.00%
Saturday, April 29, 2023	52	0.00%	0.00%
Total	3,653	2.24%	1.02%

During the influenza season, increases in the **school absenteeism** data cab be used as an early indicator for influenza circulation. The NDDoH received absenteeism data from a majority of schools in the state. Data here include absences for all reasons.

Week End Date	Total Enrollment	Percent Absent
Saturday, April 01, 2023	125,218	17.00%
Saturday, April 08, 2023	124,442	12.53%
Saturday, April 15, 2023	125,580	13.75%
Saturday, April 22, 2023	125,805	16.63%
Saturday, April 29, 2023	125,969	15.43%

During the influenza season, **influenza outbreaks** are common anywhere people gather, including schools, child care centers, long-term care facilities, and health care facilities. Outbreaks of influenza-like illness may be reported to the NDDoH. The following outbreaks have been reported this season.

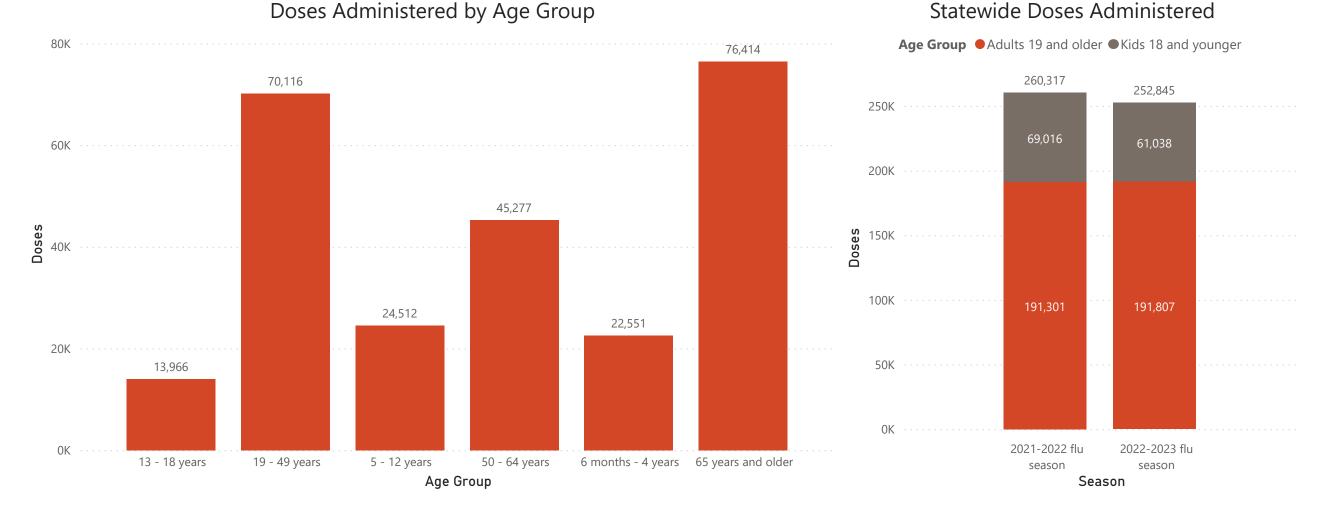

Number of Outbreaks	Congregate Setting Type
5	Assisted Living
1	Basic Care
2	Child Care
1	Long-term Care
1	Memory Care
9	Skilled Nursing
19

Influenza vaccine doses administered data from the North Dakota Immunization Information System (NDIIS) includes all administered doses of flu vaccine documented in the NDIIS to records with a North Dakota address. Adult immunizations do not have to be reported to the NDIIS so there may be more influenza vaccine doses being administered that are not reported to the NDIIS. Age groups are determined base on age at time of vaccination.

NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received at least one dose of influenza vaccine so far this flu season. NDIIS records included in **statewide coverage rates** must have a North Dakota address.

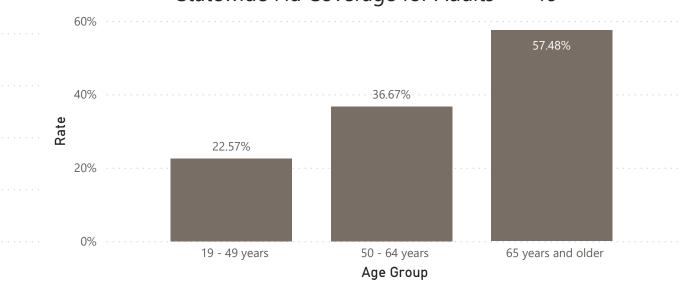

Adult immunizations do not have to be reported to the NDIIS so adult coverage rates may be higher.
