

As we enter February, influenza activity continues to decline, now with 242 new laboratory-confirmed influenza cases. It is important to remember that although influenza activity has recently decreased in previous weeks, influenza seasons are often unpredictable, and it is too soon to say what flu activity will look like for the remainder of the season. If you have not already done so, it is not too late to get your influenza vaccination; for more information regarding flu vaccination, please visit health.nd.gov/immunize

	Last Week	Season Total
New Influenza Cases:	242	8,512
Outpatient Visits for Influenza-like Illness:	4.05%	3.49%
Laboratory Specimens Positive for Influenza:	3.46%	10.26%
Percentage of Students Absent from School:	0.05%	11.89%
New Hospitalizations due to Influenza:	1	178
New Deaths due to Influenza:	0	16

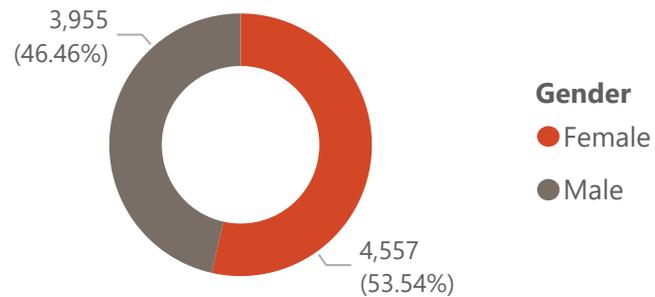

Subtype	Cases in Previous Week	Total for Season
Influenza A	231	8,108
Influenza A 2009 H1N1	0	1
Influenza A H3N2	6	254
Influenza B	5	148
Total	242	8,511

Influenza Cases by Week Number

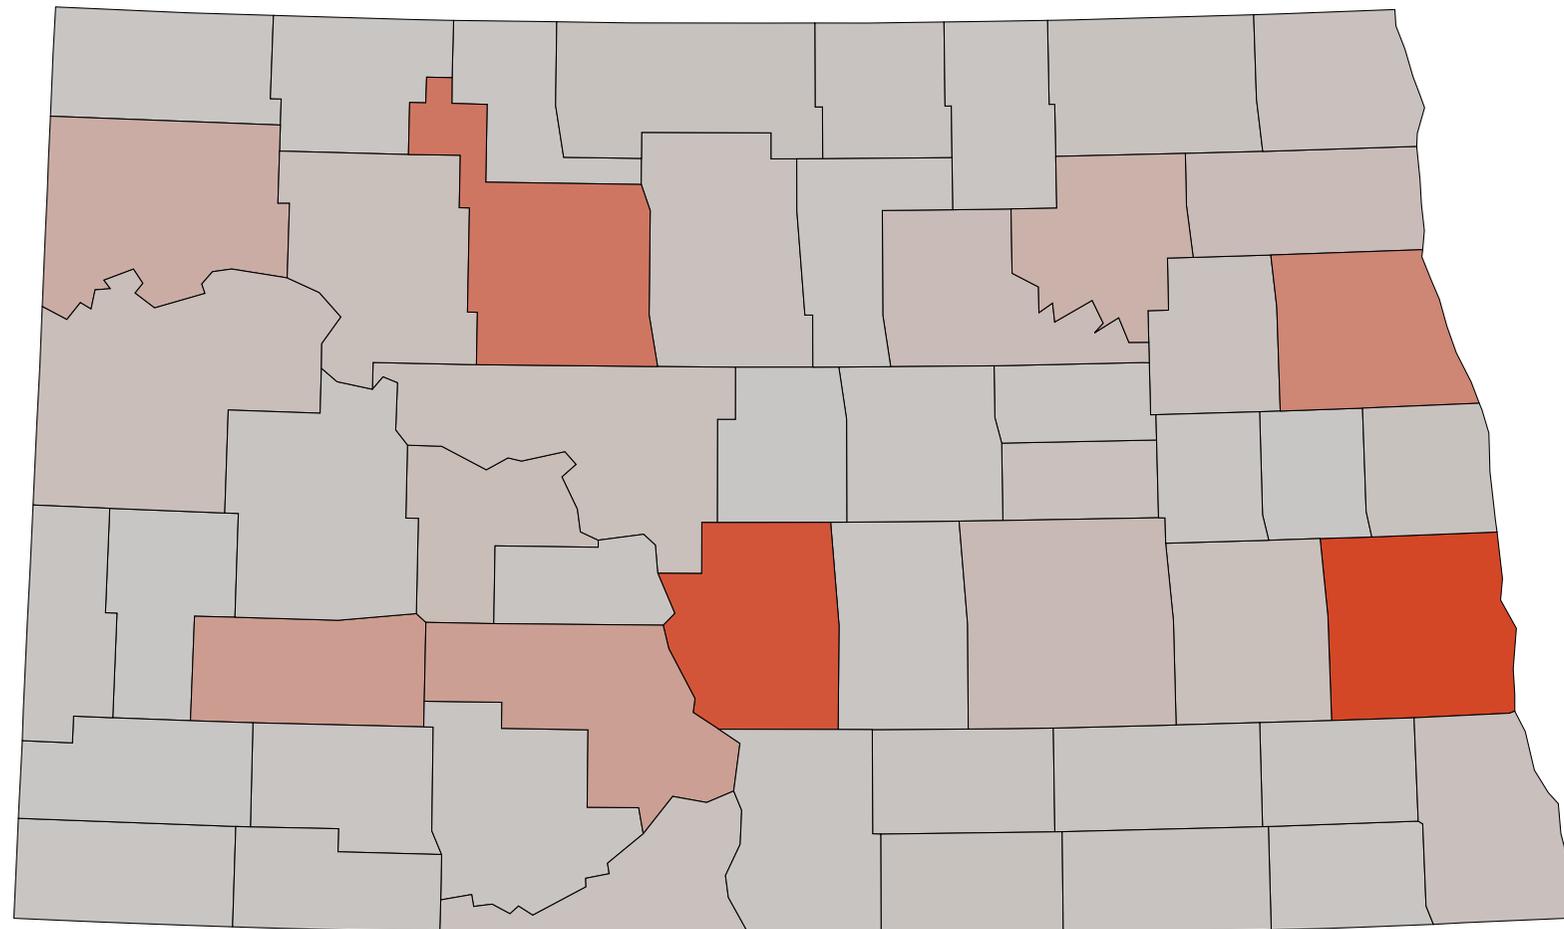

Laboratory-confirmed influenza is a reportable disease in North Dakota. Influenza "cases" include people that have tested positive for influenza in a healthcare setting. It does not include people with influenza who did not seek healthcare, or were diagnosed without a lab test, which is common. The true number of people in North Dakota is underrepresented, but case data allows us where influenza is circulating and in what populations. It also provides context regarding how the current season compares with previous seasons. Find more information about cases on ndflu.com

Influenza Cases by Age Group

Influenza Hospitalization information is collected via daily aggregated reports to the NDDoH. Because this surveillance methodology is new this year, hospitalization numbers this year may not be comparable to previous years.

Influenza Death information is obtained from Vital Records, and is based on the listed cause of death on the individuals death certificate.

Outpatient Influenza-like Illness (ILI) The NDDoH participates in the national U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet). Data from participating outpatient providers in north Dakota are pooled to create a state-wide estimate for the weekly percent of healthcare visits due to influenza-like illness (ILI). Patients presenting with a fever of 100 degrees or greater AND a cough and/or sore throat are considered to have ILI. For more information on state and national ILINet data, see [FluView Interactive](#)

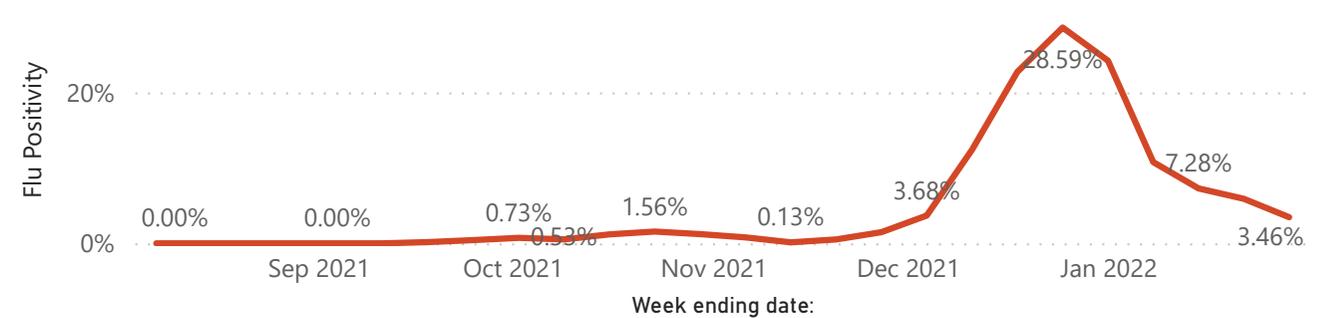

Percent ILI by Week

Week Ending Date:	Total # of Patients Seen for Any Reason	Percent ILI
Saturday, December 25, 2021	4,292	7.55%
Saturday, January 01, 2022	7,140	8.28%
Saturday, January 08, 2022	536	8.21%
Saturday, January 15, 2022	4,014	5.88%
Saturday, January 22, 2022	3,711	5.12%
Saturday, January 29, 2022	2,368	4.05%
Total	22,061	6.71%

Sentinel Laboratory Data The NDDoH receives influenza and RSV testing data from participating sentinel laboratories across the state. The total number of positive tests and the total number of tests conducted are reported and used to create a state-wide percent positivity statistic. For influenza, percent positivity of 10% or greater indicates 'season level' influenza activity.

Flu Positivity by Week

Week ending date:	Total # of Specimens Tested	Flu Positivity	RSV Positivity
Saturday, December 25, 2021	2,564	28.59%	5.76%
Saturday, January 01, 2022	3,226	24.21%	11.69%
Saturday, January 08, 2022	5,259	10.76%	1.21%
Saturday, January 15, 2022	5,441	7.28%	1.58%
Saturday, January 22, 2022	3,525	5.90%	1.35%
Saturday, January 29, 2022	1,184	3.46%	1.92%
Total	21,199	12.85%	3.03%

During the influenza season, increases in the **school absenteeism** data can be used as an early indicator for influenza circulation. The NDDoH received absenteeism data from a majority of schools in the state. Data here include absences for all reasons.

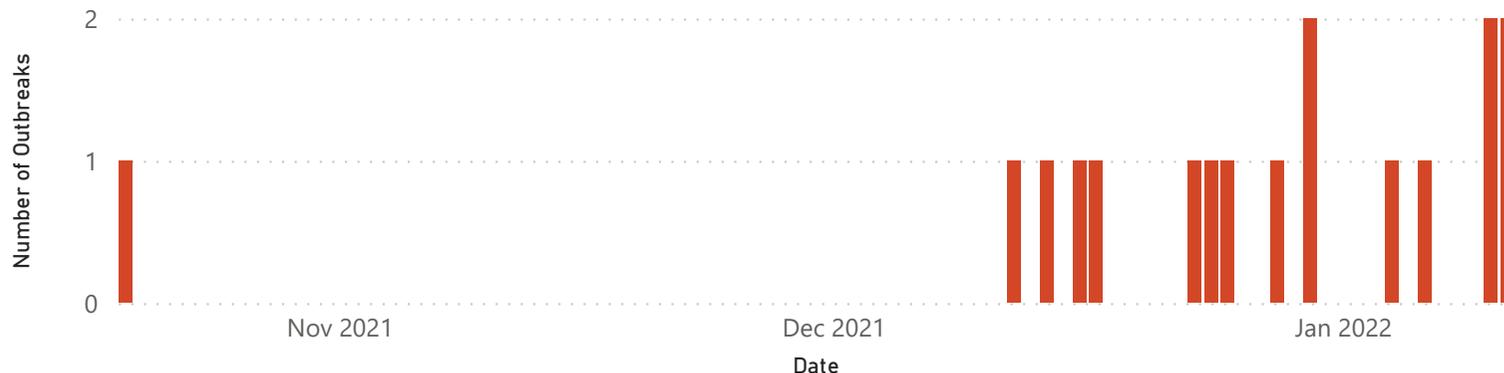

Percent of Children Absent from School by Date

Week End Date	Total Enrollment	Percent Absent
Saturday, January 01, 2022	4,988	0.42%
Saturday, January 08, 2022	124,624	18.08%
Saturday, January 15, 2022	123,553	0.55%
Saturday, January 22, 2022	124,120	0.14%
Saturday, January 29, 2022	124,452	0.05%

During the influenza season, **influenza outbreaks** are common anywhere people gather, including schools, child care centers, long-term care facilities, and health care facilities. Outbreaks of influenza or influenza-like illness may be reported to the NDDoH. The following outbreaks have been reported this season.

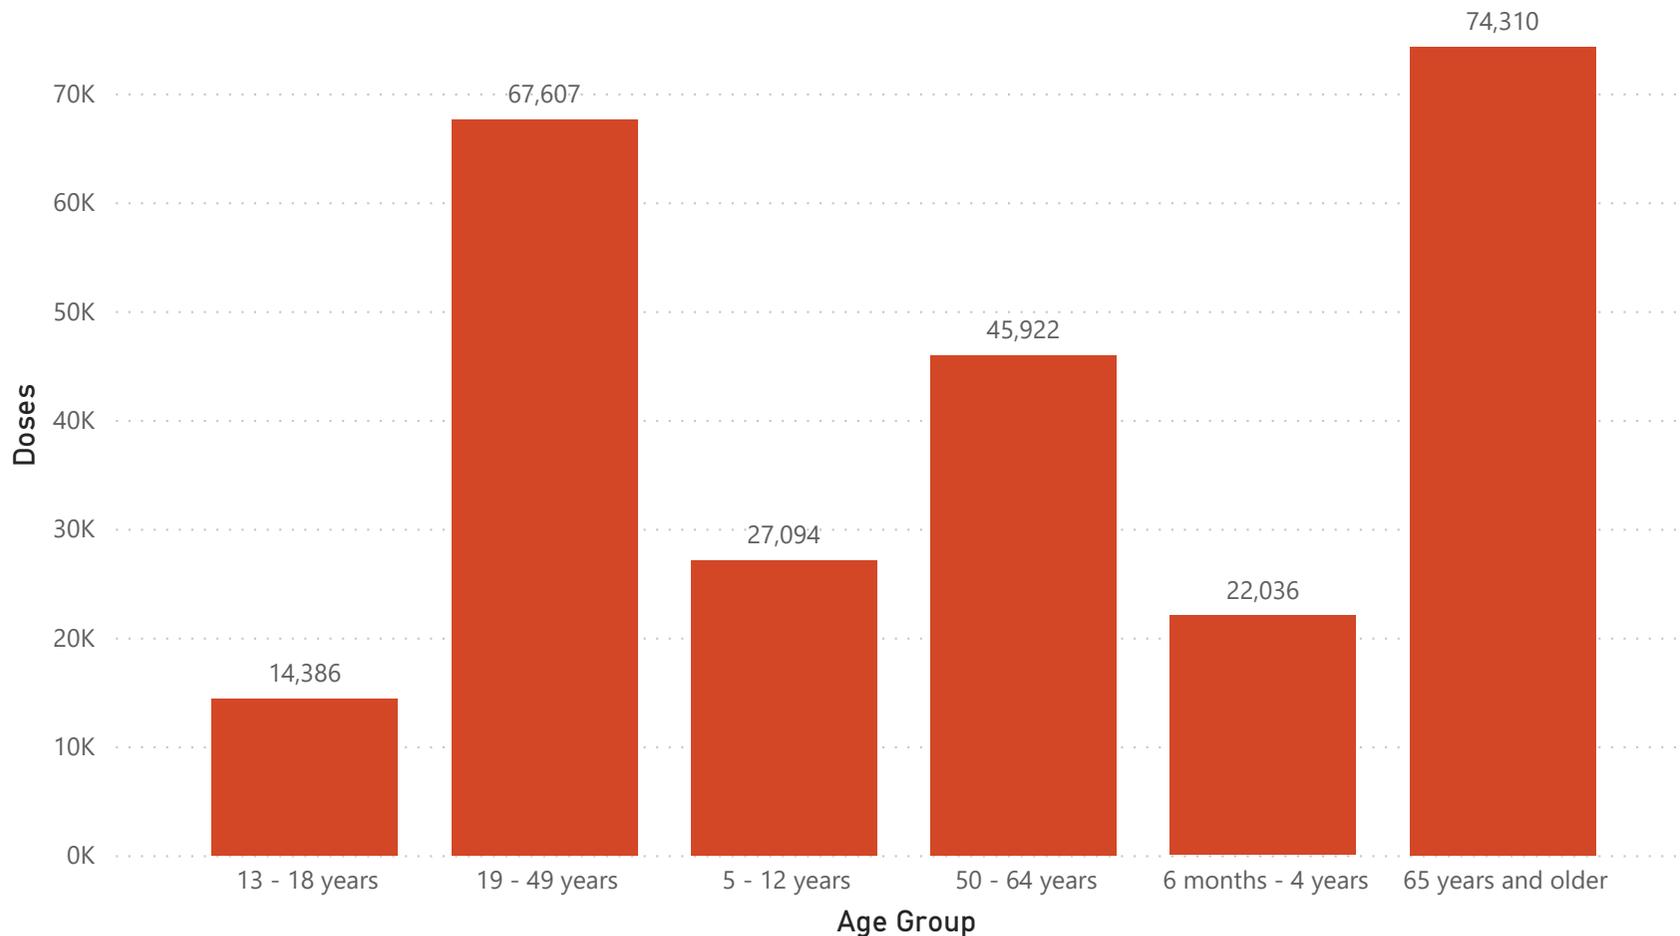

Congregate Setting Outbreaks, by Date

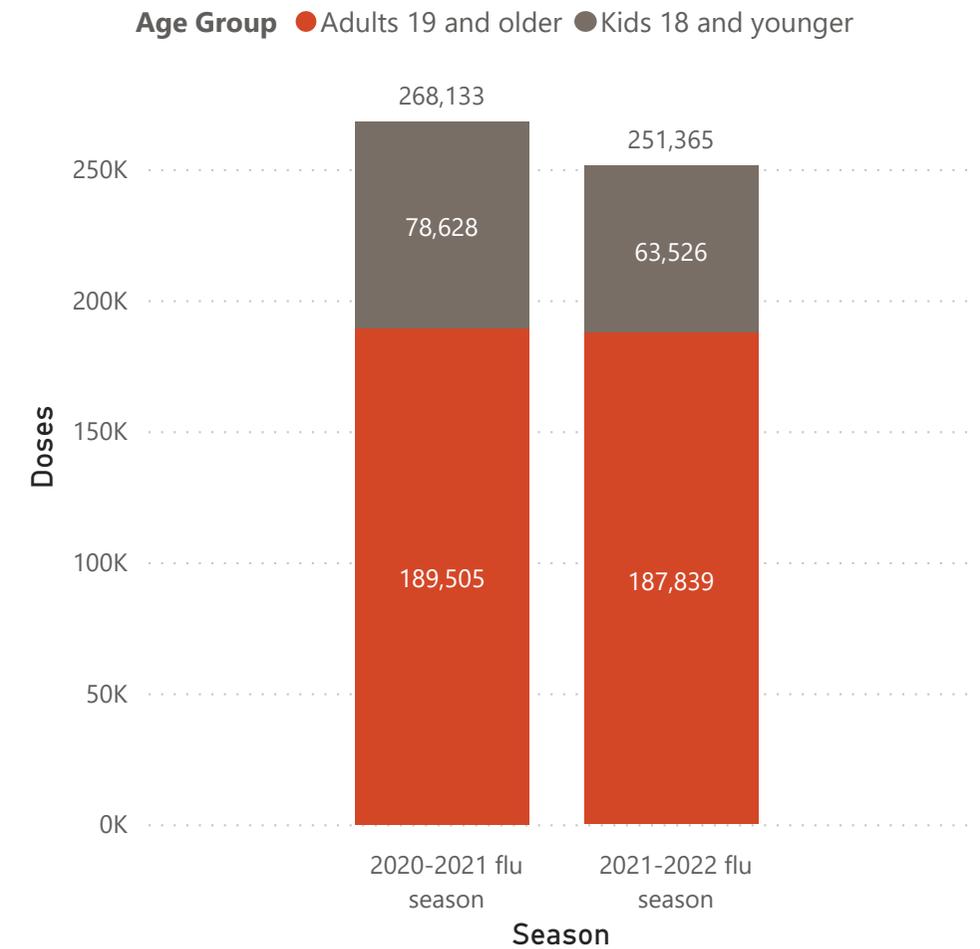

Number of Outbreaks	Congregate Setting Type
6	Assisted Living
2	Basic Care
2	College/University
10	Skilled Nursing
20	

Influenza vaccine doses administered data from the North Dakota Immunization Information System (NDIIS) includes all administered doses of flu vaccine documented in the NDIIS to records with a North Dakota address. Adult immunizations do not have to be reported to the NDIIS so there may be more influenza vaccine doses being administered that are not reported to the NDIIS. Age groups are determined base on age at time of vaccination.

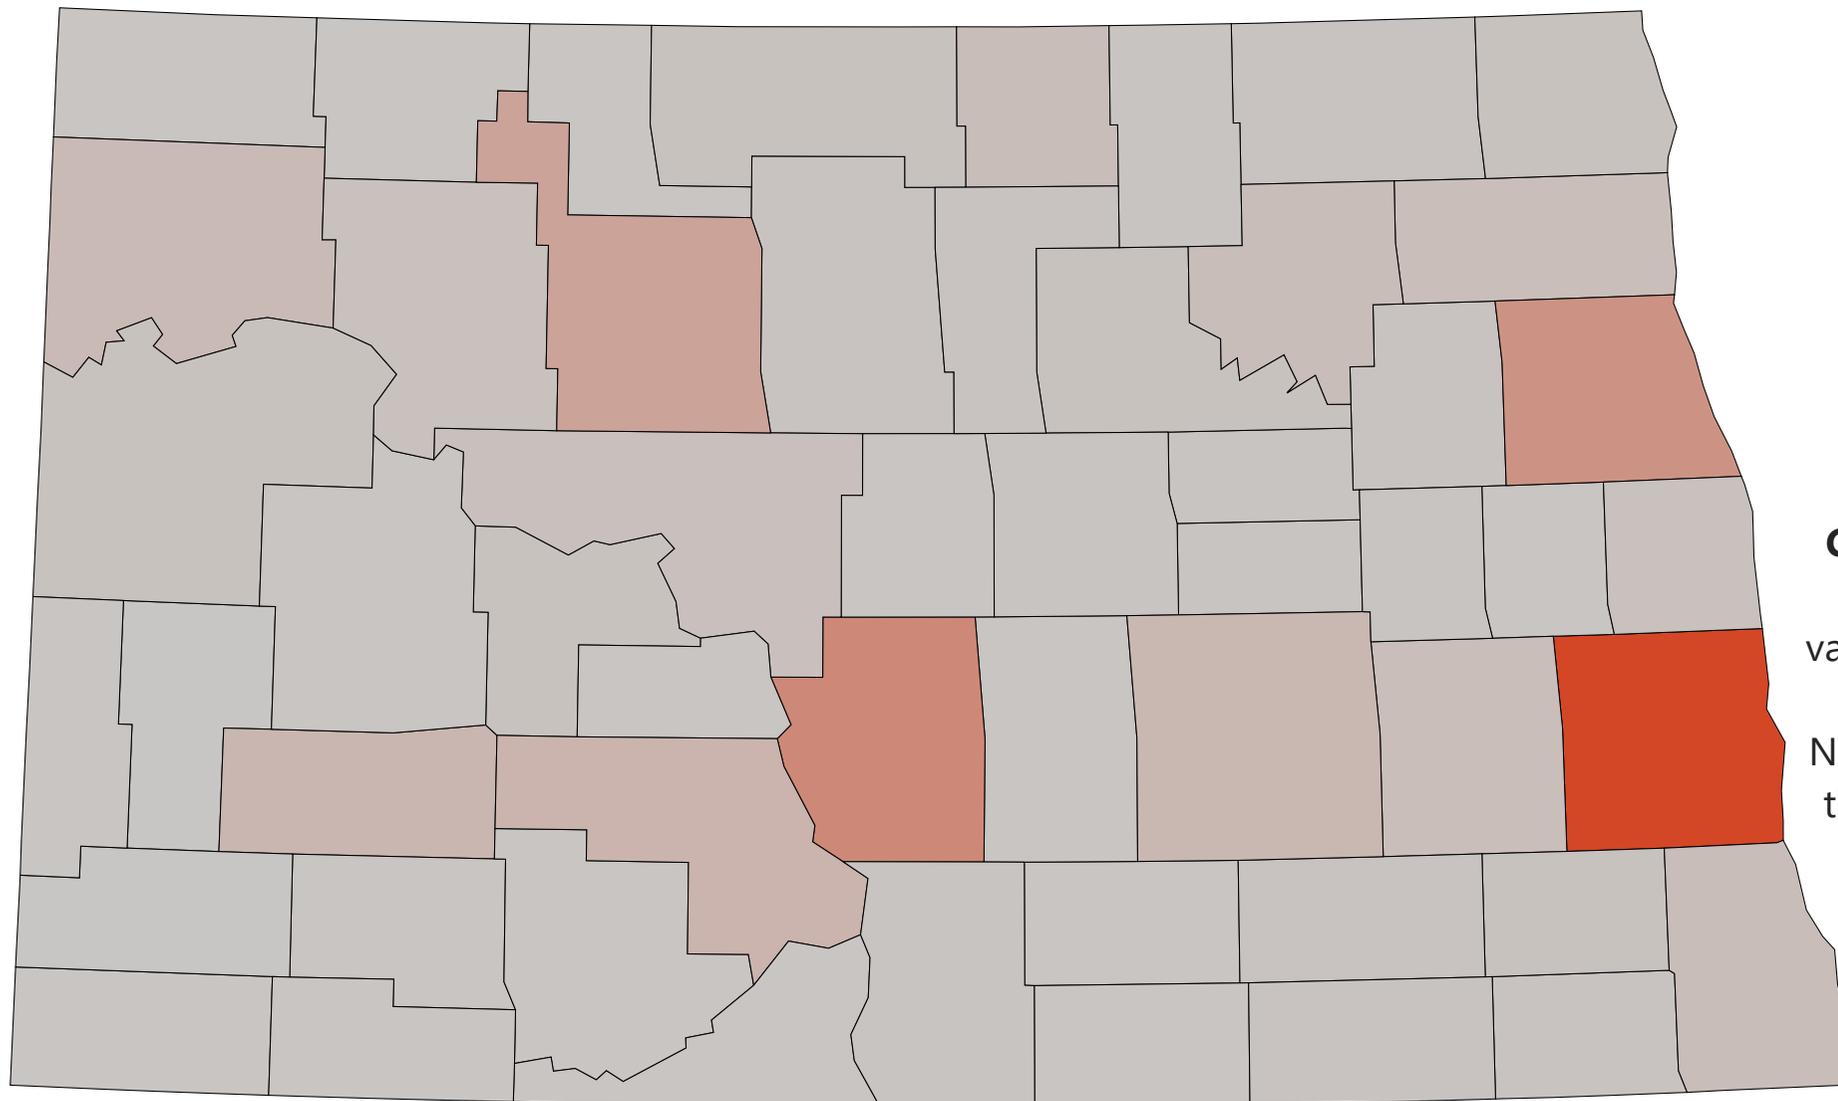

Doses Administered by Age Group

Statewide Doses Administered

Total Influenza Vaccine Doses Administered by County

Week Number

All

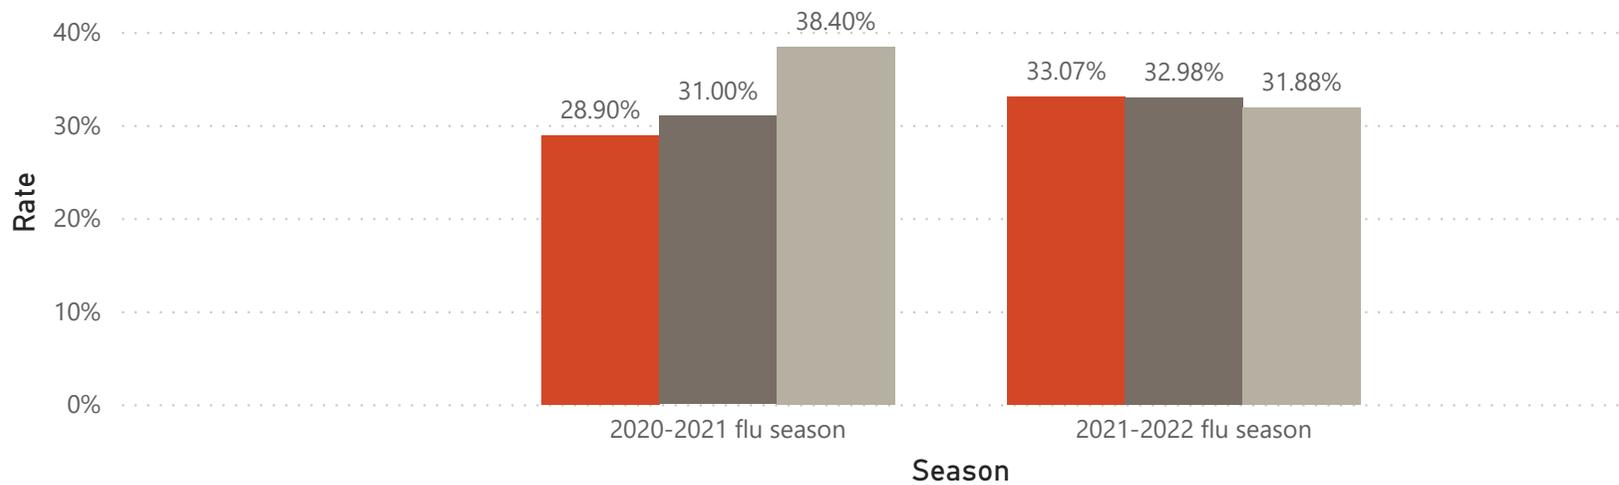

Age Group

- ADULT
- CHILD

County-level doses administered data includes all administered doses of flu vaccine documented in the NDHIS as given to an individual with an address in the North Dakota county, regardless of where the provider who administered the dose was located.

Statewide Flu Coverage for 2021-22 Season

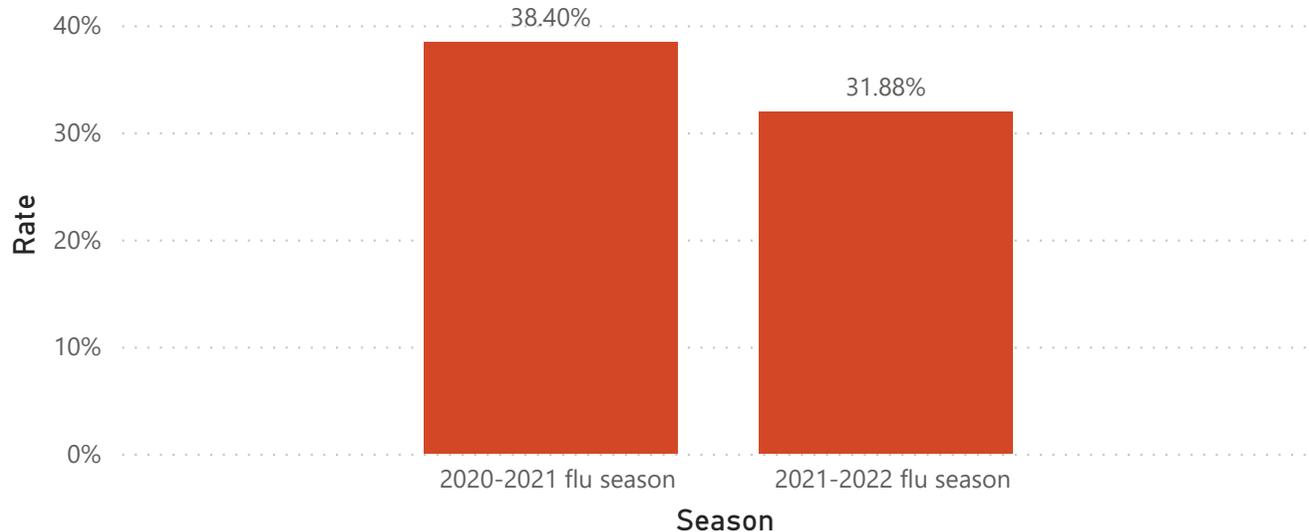

Age Group ● Adults 19 and older ● All ND 6 months and older ● Kids 18 and younger

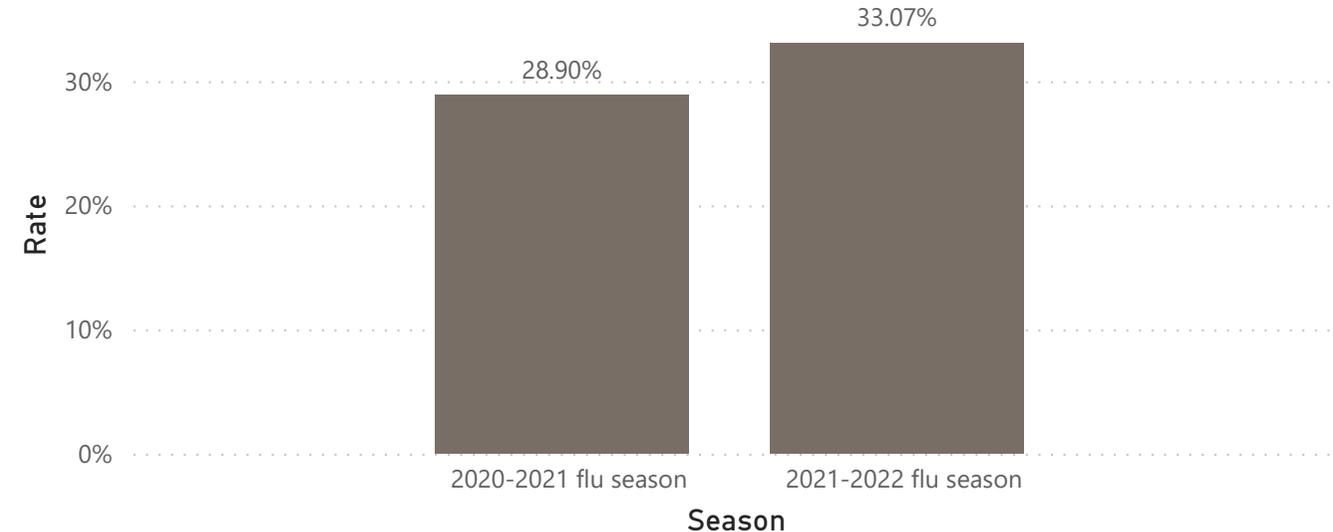

NDIIS data can also be used to estimate the percent of North Dakotans in each age group that have received at least one dose of influenza vaccine so far this flu season. NDIIS records included in **statewide coverage rates** must have a North Dakota address.

Adult immunizations do not have to be reported to the NDIIS so adult coverage rates may be higher.

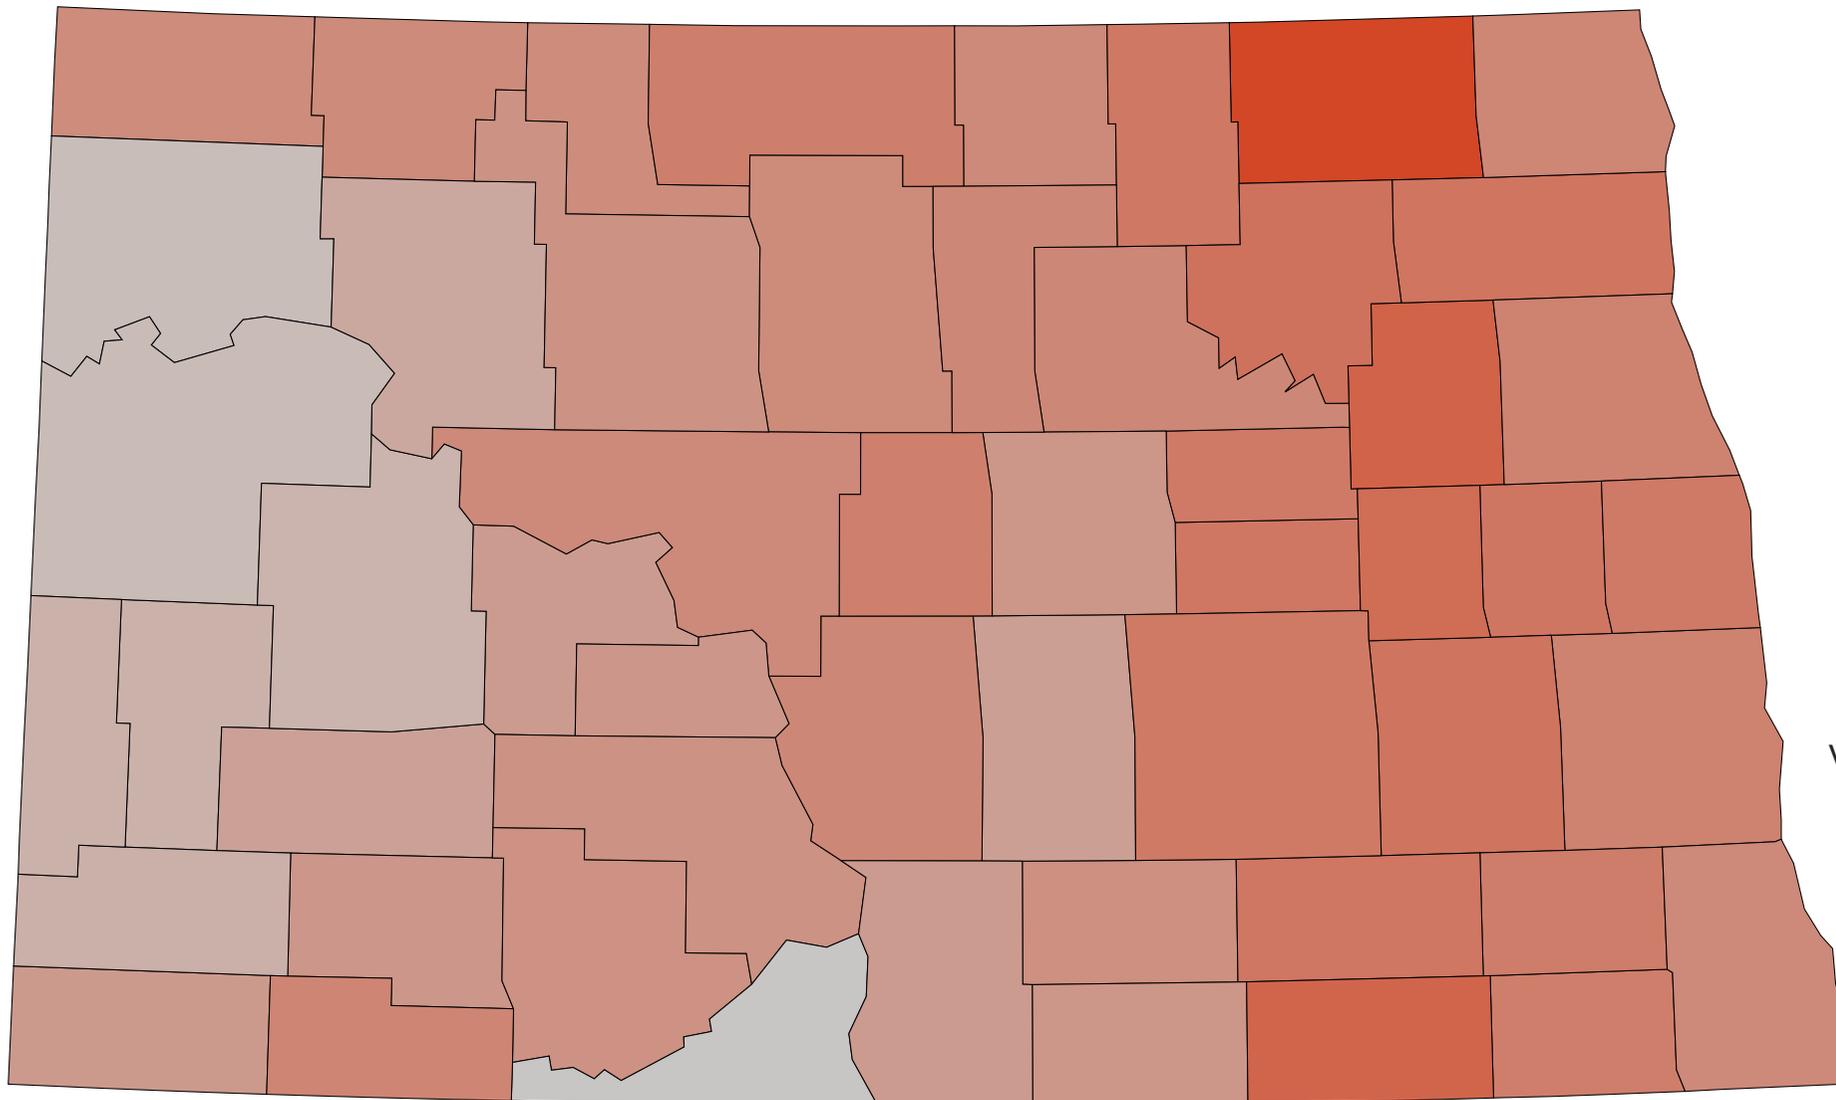

Statewide Flu Coverage for Children <= 18

Statewide Flu Coverage for Adults >= 19

Influenza Vaccine County Coverage Rates

Week Number

WEEK2

Age Group

All ND 6 months and older

County-level coverage rate data is calculated for the percent of North Dakotans in each age group that have received at least one dose of influenza vaccine so far this flu season and live in the selected North Dakota county.
